Technology issue will affect in relation between human and religion

Religion is a useful factor which creates a major influence on human technologies. Though, science and religion sometimes act as *opponents* in general sense.

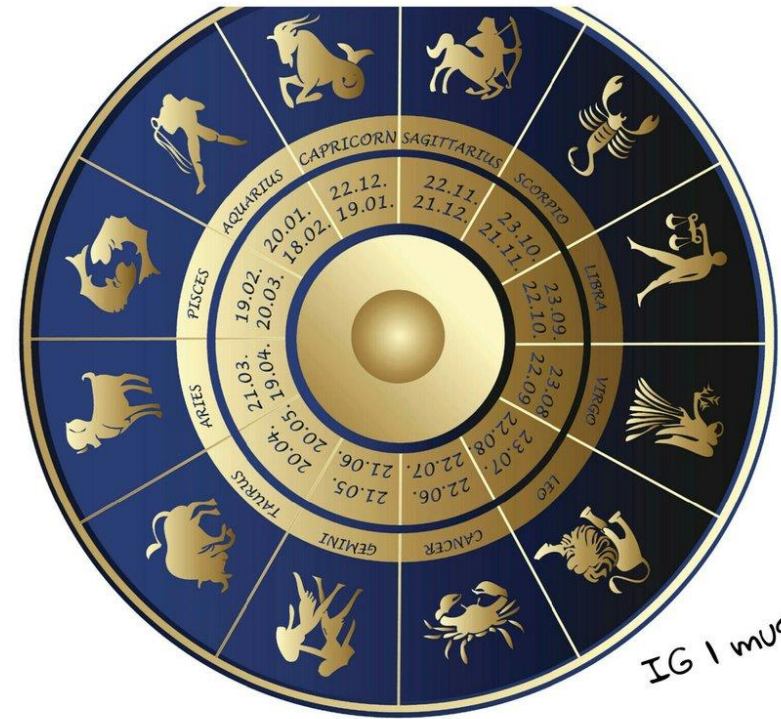

For example, the Amish (a group of traditionalist Christian) are known for simple living and plain dress who are slower to adopt modern technology. They focus on face-to-face conversations whenever possible not using any communication applications like Messenger, WhatsApp, and Telegram etc.

Referring to religious legislation

A high number of Islamic scholars represents the belief that astrology is fundamentally ***forbidden*** in Islam based on the Quran and Hadith. Though, this astro-technology is not accepted in Islam but other religion ***accepts*** it.

The Prophet ﷺ said:

“Whoever learns anything of astrology, he has acquired knowledge of a branch of magic.” [Abu Dawud 3905]

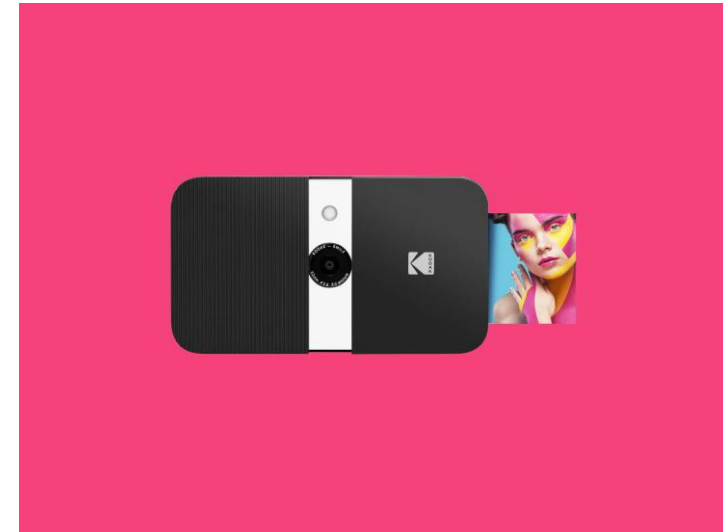

“Whoever goes to a fortune teller and asks him about something, his prayer will not be accepted for 40 days.” [Sahih Muslim 2230]

*Dealing with this technology
in a right way that doesn't
contradict values and morals*

How can we use the camera and printers in a way that doesn't violate morals and ethics ?

For example, there is a use of cameras to **photograph pornographic** materials that violate public morals and for printers that print bad magazines and photos follow them to spread them out among the public and to become accessible material in the hands of young people.

A specific **age** must be set for the use of such devices as their constant exposure to the hands of young people. It may cause some problems including ignorance of the use of such devices and their supporters and distractions also photography without permission in prohibited areas.

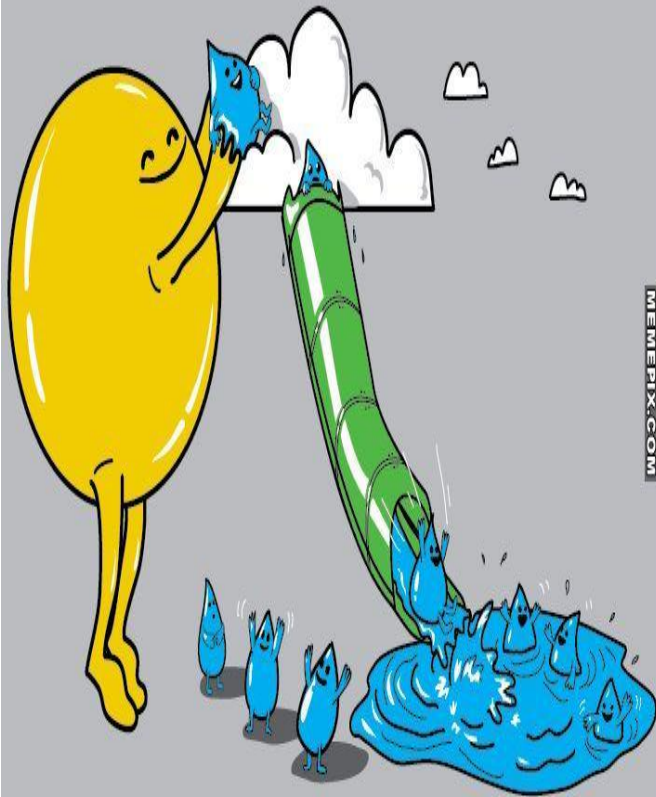

The role of science in our life

- creating new knowledge
- improving education
- increasing the quality of our lives

the Water Cycle

MEMEPIX.COM

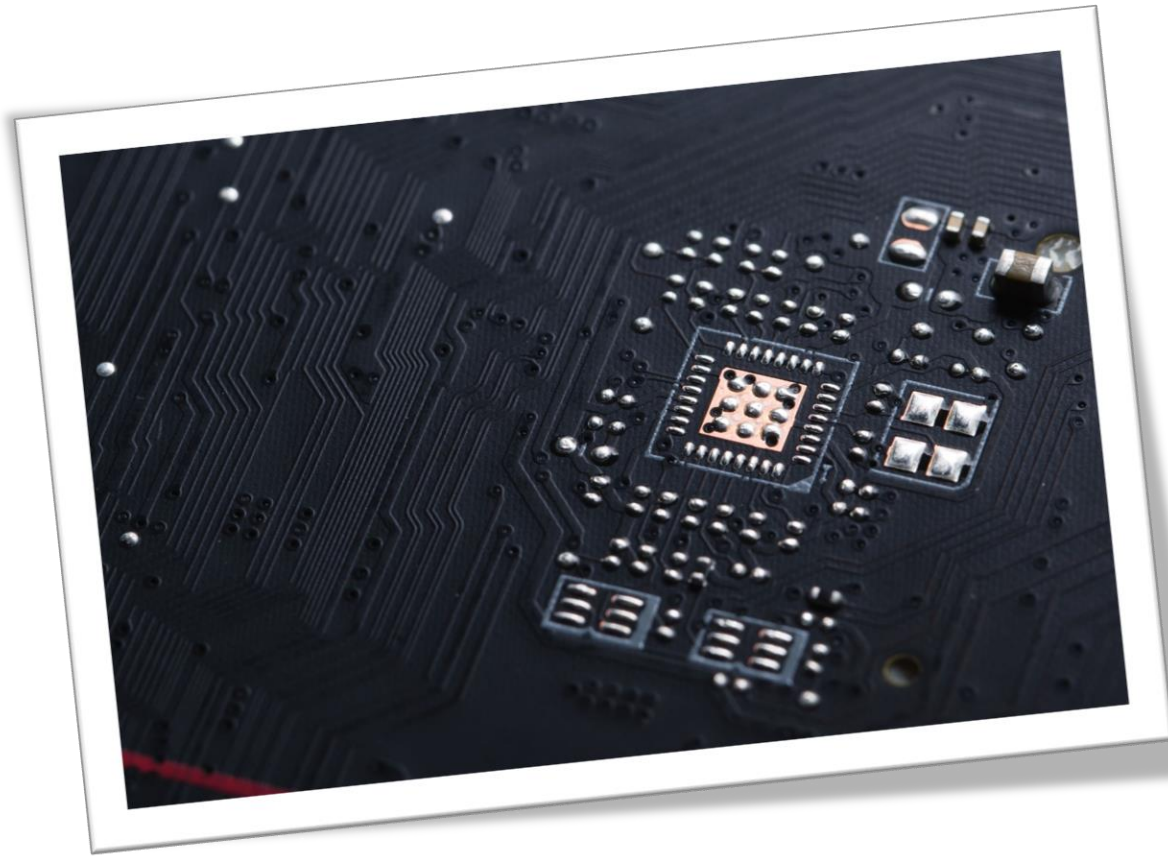

TheAwkwardYeti.com

Science is the most significant collective endeavor it contributes to ensuring a longer and healthier life monitors our life provides medicine to cure our diseases alleviates aches and pains. It helps us provide water for our basic needs, including our food, provides energy, and makes life more fun, including sports music entertainment.

Y'ALL NEED

SCIENCE

It has a specific role and a variety of functions for the benefit of our society creating new knowledge improving education and increasing the quality of our lives. Science must respond to societal needs and global challenges.

It is essential to research on the life cycle of innovation for global development. The application of science & technology and innovation must drive our pursuit of more equitable and sustainable development

Thank You!!!
