SECJ2203: Software Engineering

REFLECTION ON PHASE- 2

Team Name: Titanic Tech

Team Members:

1. Nasrin Sabrina Binti Omar (A19EC0114)
2. Izzah Fatini Binti Mohd Nasri (A19EC0055)
3. Ananda Riza Pratomo (A19EC022)
4. Naimul Hasan Shimon (A19EC4054)

For phase 2, we almost completed our task within three weeks. We called a meeting at Week 1 and discussed phase 2 task and separated our task between all of us.We as team members were determined to complete our task before the deadline and everyone demonstrated their responsibility in their work. where we discussed in groups and gathered a plethora of ideas and concepts for our step 2. Our meeting was conducted through Discord. These analytical skills significantly enhance our understanding and build our abilities, which enables us to perform our activities more effectively.

In phase 2, we explored external interface requirements, system features, performance and other requirements, as well as design constraints and software system attributes. At times, we faced problems creating the sequence diagram and use case, but after discussing in a group meeting, we derived our solution. Through our team work we have learned a lot regarding this software approach including user interfaces, software interfaces, use case diagram, activity diagram, domain model, sequence diagram, design constraints and software system attributes. The whole learning process is essential for certain activities but it will be beneficial in the long run.
