

Faculty of Engineering, School of Computing Session 2020/2021

ExCEL Report: Activity 2

Speed Typing Competition

Name:	Muhammad Irfan Daniel Bin Abd Karim
Matric Number:	A19EC0197
Programme:	Bachelor of Computer Science (Data Engineering) 2/SECP
Academic Advisor:	Dr. Nor Hawaniah Binti Zakaria

1.0 Programme Information

Date	: 1 June 2021
Time	: 2:00 p.m 5:00 p.m.
Venue	: 10fastfingers.com
Organiser	: Persatuan Mahasiswa Sains Komputer (PERSAKA)

Graduate Success Attribute:

- 1. Communication
- 2. Adaptability

Position : Treasurer

2.0 Programme Brief

Speed Typing Competition is a competition for UTM Students especially from School of Computing to test their speed of typing at their laptop or PC. This program was really relatable with Science Computer student as they usually need to write code in a short period of time, thus the typing speed must get atleast 40 word per minute (wpm). Each participants can attempt as many as possible within 3 hours and the highest wpm will be competed. On average, one participant atleast tried up to 10 times and it showed the good competitiveness among students. The 1st runner up for this contest won by Chua Chen Wei, Year 2 Data Engineering student and the prize was given until the 10th place. The prize for 1st place until 5th place was RM 20.00 each and RM 10.00 for 6th to 10th place.

4.0 Graduate Success Attribute

4.1 Communication

As a treasurer of this event, I was required to manage the cash flow or prize to the winners. After the program ends, I gathered all of winners' info such as contact number from the registration form to keep in touch for the prize giving. I messaged them via WhatsApp to ask for their bank account number and inform them as I transferred the money. This is where my communication skill were tested as the way to confront the winner must be in formal and professional. At the end of the day, all of the winners gave me a good cooperation and all the money transfer had done only a day after the competition.

4.2 Adaptability

Most of the participants was a new user to 10fastfinger.com website thus they are not get used to it and got lower wpm for the first attempt. Adaptability attributes in each person helped them to find a way to maximize their speed and efficiency while typing in the website UI. For comparisons, usually a person will type based on what they think but in this situation, the competitors need to see and memorize the unusual word at the website then type it. The increasing wpm results on each attempt was a prove that they can dealt with new surrounding within a short time.
