LEADERSHIP SELF-REFLECTION ARTICLE

A19EC9046 SONG JIYOON

I was a leader of PR4. And as a leader, I realized that I wasn't a very excellent leader in PR4. When we got the task and the template of the PR4, I could understand clearly and undergo the project tasks. But I didn't lead the group well to do the tasks. They all did the tasks as usual. And after we all have done each task, I did revise and review the tasks that we all have done to make sure that there's no mistakes or errors. Overall during the PR4, we as a group members all have communicated activately.

Not only in the PR4, but also in the other PR tasks and PS tasks. I was the one who checked back the tasks that we have done at the last for precision. Furthermore in our conversation during the tasks, I have asked the other group members about the parts that I think should be corrected. From that, I think as a leader, reviewing at the end for the tasks are also important to have the better quality of the tasks. And I realized that I could be that leader when I become a leader.

To conclude, I think I was at a production level as a leader because the group members followed me because I had participated in other PR tasks and PS tasks activately. And when I think back on what I have done as a group member and as a leader, I realized that I should improve my leadership skills especially how to lead the group members well so that they could feel more comfortable and reliable to the leader. Moreover, working as a group is also a good way to learn how other group members lead others and work when they become a leader.
