Subject: Probability and Statistical Data Analysis (Section: 08)

Reflection:

Hello and Assalamualikum. I have learned how to conduct hypothesis tests as well as statistical studies based on descriptive and inferential statistical analyses in this whole project. The hypothesis testing techniques are the foundation of inferential statistical analysis. Moreover, the descriptive analysis includes graphical representations of data variables as well as summary statistics. I feel like this is the perfect project to complete this subject completely effective. Because, with this project at least we have learn some R- programming which will definitely help us in our further study.
