MY FINAL PROJECT REFLECTION

From our hypothesis testing section, I have learned the procedure of testing for the n car weight and acceleration with t test. The main things which are learn about identification of the claim, we set up the hypothesis, we conducting the test in R, we compare based on the p value and lastly, we complete our project.

In this project I have learned about Hypothesis. I have also learned about Correlation R programming was totally new for me. And it was really great to learn.

My other two group mates were also so helpful to me. We three finished the whole project together with helping each other.

Not only that, from the project I also learn how to collect the data and lastly how it will be apply for various perpous. Which help to improve my data management skill.

I also appreciate my teacher Ms Azurah, because without her help I cant did that.
