

“ Amazon Web Services (AWS) is known as the industry leader in cloud ecosystem IaaS (Infrastructure-as-a-Service) and PaaS (Platform-as-a-Service) that can be used to construct a scalable cloud software without caring about facility provisioning (compute, storage, and network) and administration delays. We can choose the particular solutions we want and only spend for what we use with AWS, resulting in cheaper capital investment and a quicker time to value without losing application performance or customer experience.”

3RD INDUSTRIAL TALK

15TH NOVEMBER 2021

AMAZON WEB SERVICES

Amazon provides us a cloud computing service which is computing utilities that we can buy on-demand such as database, security, storage, and other IT resources via the Internet. This utility is cost-effective because pay-as-you-go pricing means that we just need to pay based on what we used. Other than that, we do not need to think about the infrastructure because it can be software that can save a lot of money, we do not need to provide space for the hardware, do not need to hire staff, and do not need to buy expensive security equipment to secure our hardware because AWS already provides all of this. All we need to do is to think about the requirement for the software that we need then in just a few clicks we are ready to use it. This utility is time-saving and very effective.

“ CLOUD COMPUTING IS THE FUTURE.”

” REFLECTON

We Think that Amazon Web services provide an easy solution for the companies big and small, Providing Cloud servers in a faster, easier and simpler way with the option to pay only after you use it can help the new companies or projects to have easier start and focus more on things that matter and provide their customer with a better service saving money and generating money for all be them customers, services providers and even amazon themselves.
