

SYAFIQ FIRDAUS

Student

Over the years, I have developed a wide range of abilities and characteristics that I hope will be beneficial to me in the future. I am a very good team member who understands that in order to complete challenging projects and tasks. Additionally, I am extremely excellent at working under time pressures, and I want to be in circumstances where there is a lot of pressure since I feel this is where I do the best.

PROJECTS

Stock Management System (12/2021 - 02/2022)

- We use C++ Object Oriented Programming to complete this project.
- In the project, our group decided to create a stock management system. It was fun when we work together although we split the work.
- The works already been lighted and we can try our best to make our part better. At the same time, we can ask for help assistance and ideas from each other in our group.
- We also can learn from each others. In this project, I get to know about how can display time to the user in our system's interface which is very interesting and awesome to me.
