NETWORK COMMUNICATIONS PROJECT

GROUP 4 – LITTLE MIX
TASK 6B&6C (INDIVIDUAL REPORT)

**LECTURER NAME : MOHD. MURTADHA BIN
MOHAMAD**

NAME : EIKIESHA DEVI SUBRAMANIAM
MATRIC NO : A21EC5015

1.0 CONTRIBUTIONS

1.1. My contribution to the group

Throughout all tasks (1-5), I was assigned to prepare the meeting minutes of each meeting. I have also been assigned to submit the final tasks (1,3,4,5 and 6A).

Task 1

- In task one, I was assigned to do the meeting minutes and also to combine the final result of the task. I did so by collecting the final result of everyone's work and combined it together in a single document, and then converted it to a PDF.

Task 2

- In task two, I was assigned to formulate the questions and also to combine the final result of the task.

Task 3

- In task three, I was assigned to research the devices and prices. I also formulated the answers for the questions given in the task.

Task 4

- In task four, I was assigned to sketch and draw the PC and network devices arrangement.

Task 5

- In task five, I was assigned to do the subnetting and IP assignment for the video conferencing room.

Task 6

- In task six, I was assigned to import task 1,3,4 and 5.

1.2. The contributions done by other members to the group

Each member had given equal contributions towards the completion of the project. Despite having difficulties in deciding the meeting time etc., each member managed to attend each meeting and complete their designated tasks accordingly.

2. TEAMWORK

We were able to learn some important knowledge as well as new skills by working in groups. We also learnt the importance of having communication skills to ensure that the discussion goes smoothly without misunderstandings among the team members. We also learnt the importance of leadership because it can guide an entire group in the right direction in completing a specific task or project with the correct content and information.

3. LESSON

3.1. What have I learnt from working as a group

Working with others allows me to pool my ideas and see problems from various angles. In a group setting, I can attempt tasks that an individual could not complete, combining a variety of skills and expertise to tackle more complex and large-scale problems. Moreover, I gained responsibility and commitment as a result of this project, which demonstrated that in order to complete something, we must have a sense of responsibility and commitment to do so.

3.2. What have I learnt from doing this project

I learnt how to work better in groups. I also learnt about the fundamentals of Network Communications. In this project, I learnt how to set up labs, the equipment, pricing and placement of equipment.

4. COMMENTS AND SUGGESTIONS

This project was fun to complete, however it was challenging as well. Since we do not have adequate knowledge of actually creating floor plans, placing wires etc. in the real world, we would not be able to accurately complete this project with the needed facts. Despite lots of research, there may be some shortcomings on our project findings as we do not have the hands on knowledge in the real field. Otherwise, this project was great and very informational.

5.0 VIDEO FOR TASK 6C
