Project Overview

The Johor State Education Department (JPNJ) in Malaysia aims to develop individuals who excel in various aspects and enhance leadership excellence through education. One of the programs introduced by JPNJ is the School Resource Centre TV (TV Pusat Sumber Sekolah), which provides a platform for students to showcase their talents in journalism, media, and hosting. However, there is currently no efficient management system to monitor the program's development in all schools, leading to manual documentation and potential errors. To address this, the project's objective is to implement a systematic and user-friendly management information system that collects and stores basic information about the TV PSS program in a centralized database. This system will enhance the management of program information, make it easily accessible, and encourage more users to participate in and benefit from TV PSS programs.
