

Reflection for P1 and P2

I am Fatin Nadhirah and I am from group Dapur Lonely and my teammates for this projects are consists of Tunku Sharifah Ainun Nabila, Nur Azra Zakirah and Nur Syaffa Husna. Our project for Software Engineering course is KiddoCare Online System which is focusing on providing an easy procedure for parents to hire a licensed caretaker and help to monitor their children activity. Through out this project, I have realize that everything we learnt inside the class will be included into this project in order to complete it.

For Phase 1, our group leader is Nur Azra Zakirah. For our first meeting, we discuss some important thing such as the objective, what process model we will choose for the project and divide the work for phase 1 for each of us. Our leader did a great job in reminding us to complete our part in phase 1 and helping us to correct the mistake. She is also able to understand the problem and able to accept our ideas and suggestion for the project.

Next, I am the leader for Phase 2 which mainly on the requirements model and analysis. In this phase, we discuss on what to include in our use case for the project. For this phase, I have already list all the part we have to do and let my teammates choose their desires part. I am thankful that everyone in my teammates able to respond and help each other to finish this phase together.

Lastly, from this project I have learnt a lot of thing especially on how to manage a group project and be a good leader. the reason because we able to finish and submit these two phase is because of the good teamwork and communication between four of us. Communication is the main key in a group of project in order to complete the task and work. Without a good communication, it will be hard for us to do our part. A good communication will lead to a good teamwork. Before we submit the phases, we will go through the overall phases and when there is someone doing some mistake, we will try to fix the mistake together. By handling this project, I know that I have to improve more on my soft skills and leadership to lead the group efficiently than before.

Reflection for P3 and P4

My name is Fatin Nadhirah and I am from group Dapur Lonely which is consist of 4 member, Tunku Sharifah Ainun Nabila, Nur Azra Zakirah and Nur Syaffa Husna. For Software Engineering project, KiddoCare Online System, each of us will be assigned to lead each phase which consist of four phase in order to complete the project. By doing this, each of us will able to experience on how to lead a group project while doing some improvements in our leadership and soft skills.

For Phase 3, our leader is Tunku Sharifah Ainun Nabila. For this phase, we will focusing more on the design model for our project which is we need to figure out what type of architectural design we will used in our project. Our group leader distributed the task based on each task given from the template and example from our lecturer and asked us to choose our desired part for the project. She make sure that we are doing fine while doing our part. she is also able to accept our suggestion on how to improve some part in our project and takes an initiative to compile the work after we all done checking the report.

Next, for phase 4, our leader is Nur Syaffa Husna. Phase 4 is about the test case and documentation. She did the same thing with Sharifah which is she let us choose our desired part for the project. She also takes part in compiling our part and checking all of it. Besides, she also did a good job in handling this phase.

In addition, after we done all the phases for this project, it clearly that communication is the main key to complete this project successfully. Besides, we also can improve our leadership and soft skills while handling the project especially on how to approach our own teammate and learnt to accept others teammates ideas.
