

```
// This program demonstrates a string
// object's length member function.
#include <iostream>
#include <string>
using namespace std;

int main ()
{
    string town;

    cout << "Where do you live? ";
    cin >> town;
    cout << "Your town's name has " << town.length() ;
    cout << " characters\n";
    return 0;
}
```
