PART 1

DETERMINISTIC FINITE AUTOMATA (DFA)

innovative • entrepreneurial • global 2014/2015 – Sem. 1 www.utm.my

UTM
UNIVERSITI TEKNOLOGI MALAYSIA

Deterministic Finite Automata (DFA)

- In computer science, we study different types of computer languages, such as Basic, Pascal, and C++.
- We will discuss a type of a language that can be recognized by special types of machines.

innovative • entrepreneurial • global www.utm.my

UTM
UNIVERSITI TEKNOLOGI MALAYSIA

Deterministic Finite Automata (DFA)

- A deterministic finite automaton (pl. automata) is a mathematical model of a machine that accepts languages of some alphabet.

innovative • entrepreneurial • global www.utm.my

Deterministic Finite Automata (DFA)

- Deterministic Finite Automaton is a quintuple $M = \{ S, I, q_0, f_s, F \}$ where,
 - S is a finite nonempty set of states
 - I is the input alphabet (a finite nonempty set of symbols)
 - q_0 is the initial state
 - f_s is the state transition function
 - F is the set of final states, subset of S .

example

- Let $M = \{ \{q_0, q_1, q_2\}, \{0, 1\}, q_0, f_s, \{q_2\} \}$ where f_s is defined as follows:

$f_s(q_0, 0) = q_1,$	$f_s(q_1, 1) = q_2$
$f_s(q_0, 1) = q_0,$	$f_s(q_2, 0) = q_0$
$f_s(q_1, 0) = q_2,$	$f_s(q_2, 1) = q_1$
- Note that for M :
 - $S = \{q_0, q_1, q_2\}$, $I = \{0, 1\}$, $F = \{q_2\}$
 - q_0 is the initial state

example

- The state transition function of a DFA is often described by means of a table, called a **transition table**.

f_s	0	1
q_0	q_1	q_0
q_1	q_2	q_2
q_2	q_0	q_1

innovative • entrepreneurial • global www.utm.my

example

- The transition diagram of this DFA is,

Each state represented by a small circle labeled with the state

Initial state with incoming unlabeled arrow not originating from any vertex

Final state with a double circle

innovative • entrepreneurial • global www.utm.my

example

Let $M = (\{q_0, q_1, q_2, q_3\}, \{a, b\}, q_0, f_s, \{q_1, q_2\})$
 where f_s is given by the table

f_s	a	b
q_0	q_0	q_1
q_1	q_0	q_2
q_2	q_0	q_3
q_3	q_3	q_3

innovative • entrepreneurial • global
www.utm.my

example

- The transition diagram of this DFA is,

```

graph LR
    start(( )) --> q0((q0))
    q0 -- a --> q0
    q0 -- b --> q1(((q1)))
    q1 -- a --> q0
    q1 -- b --> q2(((q2)))
    q2 -- a --> q0
    q2 -- b --> q3((q3))
    q3 -- "a,b" --> q3
  
```

innovative • entrepreneurial • global
www.utm.my

Deterministic Finite Automata (DFA)

- Let $M = \{S, I, q_0, f_s, F\}$ be a DFA and w is an input string,
- w is said to be accepted by M if

$$f_s^*(q_0, w) \in F$$
- f_s^* - extended transition function for M

example

$w = abb$

$q_0 \xrightarrow{a} q_0 \xrightarrow{b} q_1 \xrightarrow{b} q_2$
accepted by M

example

$w = abba$

$q_0 \xrightarrow{a} q_0 \xrightarrow{b} q_1 \xrightarrow{b} q_2 \xrightarrow{a} q_0$

not accepted by M

innovative • entrepreneurial • global www.utm.my

example

- What are the states of M? q_0, q_1, q_2
- Write the set of input symbols. $I = \{0, 1\}$
- Which is the initial state? q_0

innovative • entrepreneurial • global www.utm.my

example

- Write the set of final states. $F = \{q_2\}$
- Write the transition table for this DFA

example

The transition table, f_s

f_s	0	1
q_0	q_0	q_1
q_1	q_2	q_1
q_2	q_0	q_1

example

Which of the strings are accepted by M?

0111010, 00111, 111010,

0100, 1110

example

0111010

$q_0 \xrightarrow{0} q_0 \xrightarrow{1} q_1 \xrightarrow{1} q_1 \xrightarrow{0} q_2 \xrightarrow{1} q_1 \xrightarrow{0} q_2$

accepted by M

example

00111

$$q_0 \xrightarrow{0} q_0 \xrightarrow{0} q_0 \xrightarrow{1} q_1 \xrightarrow{1} q_1 \xrightarrow{1} q_1$$

not accepted by M

example

111010

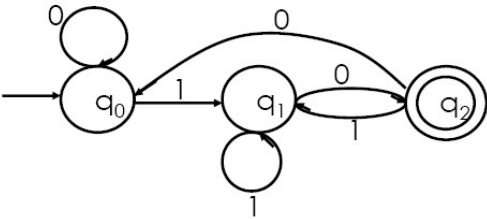

$$q_0 \xrightarrow{1} q_1 \xrightarrow{1} q_1 \xrightarrow{1} q_1 \xrightarrow{0} q_2 \xrightarrow{1} q_1 \xrightarrow{0} q_2$$

accepted by M

 **UTM**
UNIVERSITI TEKNOLOGI MALAYSIA

example

0100

$q_0 \xrightarrow{0} q_0 \xrightarrow{1} q_1 \xrightarrow{0} q_2 \xrightarrow{0} q_0$

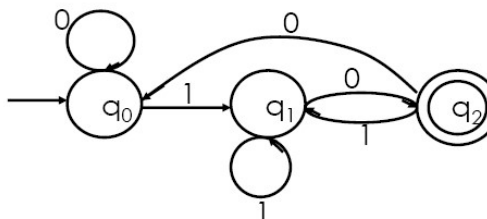

not accepted by M

innovative • entrepreneurial • global www.utm.my

 **UTM**
UNIVERSITI TEKNOLOGI MALAYSIA

example

1110

$q_0 \xrightarrow{1} q_1 \xrightarrow{1} q_1 \xrightarrow{1} q_1 \xrightarrow{0} q_2$

accepted by M

innovative • entrepreneurial • global www.utm.my

example

Construct a state transition diagram of a DFA that accepts on {a,b} that contain an even number of a's and an odd number of b's.

Example of accepted strings:
aab, baa, baaabba

innovative • entrepreneurial • global www.utm.my

example

4 states,

q_0	even num. of a's & even num. of b's.
q_1	even num. of a's & odd num. of b's.
q_2	odd num. of a's & odd num. of b's.
q_3	odd num. of a's & even num. of b's.

$S = \{q_0, q_1, q_2, q_3\}$

innovative • entrepreneurial • global www.utm.my

example

set of states, $S = \{q_0, q_1, q_2, q_3\}$

set of input symbols, $I = \{a, b\}$

initial state, q_0

final state, q_1

example

State transition function

f_s	a	b
q_0	q_3	q_1
q_1	q_2	q_0
q_2	q_1	q_3
q_3	q_0	q_2

example

State transition diagram

exercise

Let $M = (S, I, q_0, f_s, F)$ be the DFA such that $S = \{q_0, q_1, q_2\}$, $I = \{a, b\}$, $F = \{q_2\}$, q_0 = initial state, and f_s is given by,

f_s	a	b
q_0	q_0	q_1
q_1	q_2	q_1
q_2	q_2	q_0

Draw the state diagram of M .

Which of the strings
 abaa, bbbabb, bbbaa dan bababa
 are accepted by M ?

exercise

The transition diagram of M is,

Construct the transition table of M .
 Which of the strings
 baba, baab, abab dan abaab
 are accepted by M ?

exercise

- Construct a state transition diagram of a DFA M with the input set $\{0,1\}$ such that M accepts only the string 101.

Exercise

Past Year 2015/2016

(a) Let $B = \{S, I, q_0, f_0, F\}$ be the Deterministic Finite Automata (DFA) machine as depicted in Figure 7.

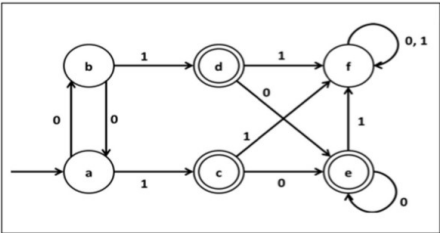

Figure 7

- i. List all the components of S, I, q_0, F . (4 marks)
- ii. Construct a transition table for the above machine. (4 marks)
- iii. Is the string 111010 accepted by the machine? (3 marks)
- iv. Find the sequence of configurations and state if the string 01011101 is accepted by the machine. (3 Marks)

innovative • entrepreneurial • global
www.utm.my

Exercise

Past Year 2015/2016

(b) Let $H = \{S, I, O, q_0, f_0, f_1\}$ be the finite state machine of equipment Y. Table 4 shows the transition table for the machine.

Table 4

State	f_1		f_0	
	0	1	0	1
A	B	C	0	0
B	D	B	1	0
C	E	C	0	0
D	B	F	0	0
E	D	B	0	1
F	E	C	0	1

- i. Draw the transition diagram with $q_0 = \{A\}$ for the above machine. (5 marks)
- ii. What is the output string if the input string is 01110001. (2 marks)
- iii. Is input string 11101010 accepted by the machine? Explain using the sequence of configurations and its output. (4 marks)

innovative • entrepreneurial • global
www.utm.my

SCSI1013: Discrete Structures

PART 2

FINITE STATE MACHINE (FSM)

innovative • entrepreneurial • global

2014/2015 – Sem. 1

www.utm.my

Finite State Machines (FSM)

- Automata with input as well as output.
- Every state has an input and corresponding to the input the state also has an output.
- These types of automata are commonly called **finite state machines**.

innovative • entrepreneurial • global

www.utm.my

Finite State Machines (FSM)

- A finite state machine is a sextuple,
 $M = \{ S, I, O, q_0, f_s, f_o \}$
 where,
 S is a finite nonempty set of states
 I is the input alphabet
 O is the output alphabet
 q_0 is the initial state
 f_s is the state transition function
 f_o is the output function.

example

- Let $M = \{ S, I, O, q_0, f_s, f_o \}$ be the FSM
- where,
 $S = \{ q_0, q_1, q_2 \}$,
 $I = \{ a, b \}$,
 $O = \{ 0, 1 \}$,
 $q_0 =$ initial state,

q_1	q_2	q_2	0	0
q_2	q_1	q_2	1	1

- Draw the transition diagram of M .
- What is the output string if the input string is $aabbb$?
- What is the output string if the input string is $ababab$?
- What is the output if the input string is $abbbaba$?
- What is the output if the input string is $bbbababa$?

innovative • entrepreneurial • global www.utm.my

exercise

- Design a FSM that accepts all string over {a,b} that begin with aa.
- For example: aaab, aabba, aababab

innovative • entrepreneurial • global www.utm.my

Exercise Past Year 2015/2016

Pac-Man is one of the few games to have been consistently published for over three decades, having been remade on numerous platforms and spawned many sequels. The typical version of *Pac-Man* is a one player game where he/she manoeuvres the *Pac-Man* around the maze, attempting to avoid four 'ghosts' characters while eating dots that distributed throughout the maze. Among the dots, there are four super dots that located at four corners of the maze. If the *Pac-Man* collides with the ghost, he loses one of his three lives and play resumes with the ghosts reassigned to their initial starting location. When *Pac-Man* eats a super dot, he is able to chase the ghosts for a few seconds of time before the super dot expires. The game ends when *Pac-Man* has lost all his three lives. Figure 8 shows a screenshot of the *Pac-Man* game.

innovative • entrepreneurial • global www.utm.my

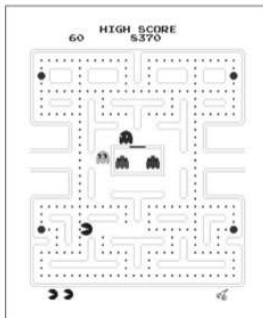

Exercise

Past Year 2015/2016

Noted that the ghosts in Pac-Man have four behaviours:

- S_1 : randomly wander the maze
- S_2 : chase Pac-Man when he is within the line of sight
- S_3 : avoid Pac-Man when has consumed a super dot
- S_4 : return to the initial position to restart the game

Label:

-  Super dot
-  Ghost
-  Pac-Man

The inputs are:

- A : spot Pac-Man (Pac-Man is within the line of sight)
- B : lose Pac-Man (Pac-Man is not within the line of sight)
- C : Pac-Man eats super dot
- D : super dot expires
- E : collides with Pac-Man
- F : reach the initial position

The outputs are:

- 0 : nothing happened
- 1 : Pac-Man loses his life
- 2 : number of ghosts reduces by 1

innovative • entrepreneurial • global
www.utm.my

Exercise

Past Year 2015/2016

Complete the transition table below. (Note: Copy Table 5 in your answer booklet and complete the unshaded cells only). (10 Marks)

Exercise Past Year 2016/2017

ATM is a computerized machine that provides bank customers to gain access to their accounts using magnetic encoded plastic card and code number. It enables the customer to perform online transactions without involving cashier, clerk and bank teller. The customer make cash withdrawal, check account balances, transfer money as well as purchase prepaid mobile phone credit by using ATM card.

Typical PIN based ATM has following processes:

- Insert ATM card to establish interface. The card will be validated to ensure the correct ATM card is inserted. If the card is unsuccessfully validated, the card is ejected and ATM session is terminated.
- For valid ATM card, user is asked to enter the PIN and press the execution key for the system to match the PIN, if PIN does not matches, then user access is denied to the next stage and he or she is requested to repeat the operation with the correct PIN for a fixed two retries.

innovative • entrepreneurial • global www.utm.my

Exercise Past Year 2016/2017

- If after the third time the PIN is unmatched, the card will be locked and ATM session is terminated.
- If the PIN matches then the transaction interface is displayed and user has to select the transaction that they wish to perform.
- After the machine performs the chosen transaction, it will prompt user if a new transaction is to be performed. If the response is 'Yes', the transaction interface is again displayed and if 'No' the transaction is terminated and card ejected and ATM session is terminated.

innovative • entrepreneurial • global www.utm.my

 **UTM**
UNIVERSITI TEKNOLOGI MALAYSIA

Exercise Past Year 2016/2017

Based on the above description, the states, inputs and outputs are as follow:

States:

S ₁ : Welcome screen	S ₆ : Choosing transaction screen
S ₂ : Validating card	S ₇ : Performing transaction
S ₃ : 1 st PIN entering screen	S ₈ : Asking for other transaction screen
S ₄ : 2 nd PIN entering screen	S ₉ : Terminate ATM session
S ₅ : 3 rd PIN entering screen	

Inputs:

A: Insert ATM card	F: Transaction is selected
B: Valid ATM card	G: Complete transaction
C: Invalid ATM card	H: Yes for other transaction
D: Correct PIN	I: No for other transaction screen
E: Incorrect PIN	

States:

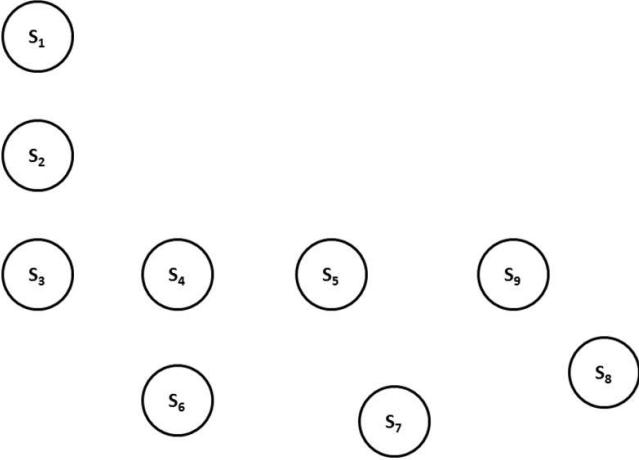

0: Nothing happened
1: Eject ATM card
2: Lock ATM card

innovative • entrepreneurial • global www.utm.my

 **UTM**
UNIVERSITI TEKNOLOGI MALAYSIA

Exercise Past Year 2016/2017

Redraw the transition diagram for the above system in your answer booklet and complete it.
(10 Marks)

The diagram shows nine states represented by circles, arranged as follows:

- S₁ is at the top left.
- S₂ is below S₁.
- S₃, S₄, S₅, and S₉ are in a horizontal row below S₂.
- S₆ is below S₄.
- S₇ is below S₅.
- S₈ is below S₉.

innovative • entrepreneurial • global www.utm.my
