LECTURER- DR. MUHAMAD AFZAMIMAN BIN ARIPIIN

OVERVIEW

These lessons provide basic foundational information about several types of thinking skills: critical and creative. We, the students have used critical and creative skills each day with the “*Thought for the Day*.”

INTRODUCTION

Thinking skills are extremely important for all of us. We need to push ourselves in this area to be all we can. Remember that we are only using a portion of this wonderful computer called our mind. So begin to lean forward and stretch your efforts. It is like the picture of the brain with the light switch—it’s time to turn on our minds to reach our full potential. During this lesson I have learnt some important thinking skills. Such as:

1. EMPLOYABILITY SKILLS:

From the first day of class I have been about and working to develop my thinking skills. Employability skills are mainly considered essential qualifications for many job positions and hence have become necessary for an individual's employment success at just about any level within a business environment. I have learnt, what are employability skills specifically? I think it might be very helpful for my future carrier. I ended up this lesson by practicing a creative thinking exercise.

2. SCHOLARSHIP SKILLS:

While every scholarship provider is different and identify individuals with skillsets unique to their trade, there are common attributes that all scholarship providers look for in aspiring scholars. Being able to cultivate and meaningfully portray these qualities will do wonders in helping you ace your scholarship interview! Here are some qualities I have learnt in my class that scholarship providers are drawn to.

1. Passion
2. Confidences
3. Composure
4. Enthusiasm
5. Others skill

3.COMMUNICATION SKILLS:

In the 2nd week its specially for me and my group to taught something about basic communication skills. Because this topic provided by our lecturer to conducting a class with thinking skills and activities. Moreover, I have learnt so many things about effective communication skills and how to develop my communication skills. Being able to communicate effectively is perhaps the most important of all life skills. It is what enables us to pass information to other people, and to understand what is said to us. And at the end of our presentation we have organized some creative games about communication skills.

4. GLOBAL CITIZENSHIP SKILLS

The 3rd week, For the first time I have learnt briefly about global citizenship skills includes all global issue. This session was very interesting for me because I attend so many games to understand this topic. And why global citizenship skills very important. Basically it is a way of living that recognizes our world is an increasingly complex web of connections and interdependencies. One in which our choices and actions may have repercussions for people and communities locally, nationally or internationally.

5.ADAPTABILITY SKILLS:

In this week, I have learnt some new things about adaptability skills. Adaptability is one of those qualities that any world traveler will learn. When traveling, nothing ever goes perfectly. There are always challenges, whether it is a language barrier, getting lost in an unfamiliar place, or flight delays. The ability to adjust to changing circumstances and deal with obstacles is invaluable to a global citizen. Without this important characteristic, problems would never get solved because of the difficulties involved. A true global citizen often learns adaptability from their travels and keeps a positive attitude when the road gets rough.

ITS ALL ABOUT MY GOAL

The goals or reflections of these lessons is for only not for me as well as my classmates also. Each student to (1) comprehend critical and creative thinking skills, and (2) appreciate the importance of thinking skills to his or her life.

We have looked at thinking skills that can help all of us with our education and other aspects of life. We can never spend too much time building these skills, because they are important to our growth.
