SCSI1013: Discrete Structures

CHAPTER 3

**COUNTING METHODS**  
[Part 1]

innovative • entrepreneurial • global 2014/2015 – Sem. 1 www.utm.my

UTM  
UNIVERSITI TEKNIK MALAYSIA

**Basic Counting Principles**

- Counting principle is all about choices we might make given many possibilities.
- It is used to find the number of possible outcomes.
- It provides a basis of **computing probabilities of discrete events**.

innovative • entrepreneurial • global www.utm.my

UTM  
UNIVERSITI TEKNIK MALAYSIA

**Basic Counting Principles**

**Some sample of counting problems:**

- Problem 1** - How many ways are there to seat  $n$  couples at a round table, such that each couple sits together?
- Problem 2** - How many ways are there to express a positive integer  $n$  as a sum of positive integers?

innovative • entrepreneurial • global www.utm.my

UTM  
UNIVERSITI TEKNIK MALAYSIA

**Basic Counting Principles**

- Problem 3** - There are three boxes containing books. The first box contains 15 mathematics books by different authors, the second box contains 12 chemistry books by different authors, and the third box contains 10 computer science books by different authors. A student wants to take a book from one of the three boxes. In how many ways can the student do this?

innovative • entrepreneurial • global www.utm.my

UTM  
UNIVERSITI TEKNIK MALAYSIA

**Basic Counting Principles**

**Problem 4** - The department will award a free computer to either a CS student or a CS professor. How many different choices are there, if there are 530 students and 15 professors?

innovative • entrepreneurial • global www.utm.my

UTM  
UNIVERSITI TEKNIK MALAYSIA

**Problem 5** - A scholarship is available, and the student to receive this scholarship must be chosen from the Mathematics, Computer Science, or the Engineering Department. How many different choices are there for this student if there are 38 qualified students from the Mathematics Department, 45 qualified students from the Computer Science Department and 27 qualified students from the Engineering Department?

innovative • entrepreneurial • global www.utm.my

**UTM**  
UNIVERSITI TEKNIK MALAYSIA

## Basic Counting Principles

- There are a number of basic principles that we can use to solve such problems:
  - Addition Principle**
  - Multiplication Principle**

innovative • entrepreneurial • global [www.utm.my](http://www.utm.my)

**UTM**  
UNIVERSITI TEKNIK MALAYSIA

## Addition Principle

- Suppose that tasks  $T_1, T_2, \dots, T_k$  can be done in  $n_1, n_2, \dots, n_k$  ways, respectively.
- If all these tasks are **independent** of each other, then the number of ways to do one of these tasks is  $n_1 + n_2 + \dots + n_k$

innovative • entrepreneurial • global [www.utm.my](http://www.utm.my)

**UTM**  
UNIVERSITI TEKNIK MALAYSIA

## Basic Counting Principles

- If a task can be done in  $n_1$  ways and a second task in  $n_2$  ways, and if these two tasks cannot be done at the same time, then there are  $n_1 + n_2$  ways to do either task.

innovative • entrepreneurial • global [www.utm.my](http://www.utm.my)

**UTM**  
UNIVERSITI TEKNIK MALAYSIA

## Example 1

We want to find the number of integers between 5 and 50 that end with 1 or 7.

**Solution:**

- Let  $T$  denote this task. We divide  $T$  into the following tasks.
  - $T_1$ : find all integers between 5 and 50 that end with 1.
  - $T_2$ : find all integers between 5 and 50 that end with 7.

innovative • entrepreneurial • global [www.utm.my](http://www.utm.my)

**UTM**  
UNIVERSITI TEKNIK MALAYSIA

- $T_1$ : find all integers between 5 and 50 that end with 1.  
→ 11, 21, 31, 41 => 4 ways
- $T_2$ : find all integers between 5 and 50 that end with 7.  
→ 7, 17, 27, 37, 47 => 5 ways

$\therefore n_1 + n_2 = 4 + 5 = 9$  ways.

innovative • entrepreneurial • global [www.utm.my](http://www.utm.my)

**UTM**  
UNIVERSITI TEKNIK MALAYSIA

## Example 2

We want to find the number of integers between 4 and 100 that end with 3 or 5.

**Solution:**

Let  $T$  denote this task. We divide  $T$  into the following tasks.

- $T_1$ : find all integers between 4 and 100 that end with 3.
- $T_2$ : find all integers between 4 and 100 that end with 5.

innovative • entrepreneurial • global [www.utm.my](http://www.utm.my)

**UTM**

- $T_1$ : find all integers between 4 and 100 that end with 3.  
=> 13, 23, 33, 43, 53, 63, 73, 83, 93  
=> 9 integers
- $T_2$ : find all integers between 4 and 100 that end with 5.  
=> 5, 15, 25, 35, 45, 55, 65, 75, 85, 95  
=> 10 integers

innovative • entrepreneurial • global www.utm.my

**UTM**

- Task  $T_1$  can be done in 9 ways.
- Task  $T_2$  can be done in 10 ways.
- The number of ways to do one of these tasks is,  
 **$9+10=19$**
- Task  $T$  can be completed in 19 ways.

innovative • entrepreneurial • global www.utm.my

**UTM**

### Example 3

4 books

2 books

3 books

- A student wants to take a book from one of the three boxes.
- In how many ways can the students do this?

innovative • entrepreneurial • global www.utm.my

**UTM**

- $T_1$ : choose a mathematics book  
➢ 4 ways
- $T_2$ : choose a chemistry book  
➢ 2 ways
- $T_3$ : choose a computer science book.  
➢ 3 ways
- The number of ways to do one of these tasks is,  
➢  $4+2+3=9$

innovative • entrepreneurial • global www.utm.my

**UTM**

### Exercise

- There are 8 male students and 21 female students in Discrete Structure class. Among all of them, 7 students are Chinese and the rest are Malay.
- In how many ways can we select 1 student - a boy or a girl?
- In how many ways can we select 1 student - a Chinese or a Malay?

innovative • entrepreneurial • global www.utm.my

**UTM**

### Exercise - Solution

- In how many ways can we select 1 student - a boy or a girl?
  - To select a boy
    - 8 ways
  - To select a girl
    - 21 ways
  - The number of ways
    - **$8+21=29$  ways**

- In how many ways can we select 1 student - a Chinese or a Malay?
  - To select a Chinese
    - 7 ways
  - To select a Malay
    - 22 ways
  - The number of ways
    - **$7+22=29$  ways**

innovative • entrepreneurial • global www.utm.my

**UTM**

## Multiplication Principle

- A task  $T$  can be completed in  $k$  successive steps.
  - Step 1** can be completed in  $n_1$  different ways.
  - Step 2** can be completed in  $n_2$  different ways.
  - Step  $k$**  can be completed in  $n_k$  different ways.
- Then the task  $T$  can be completed in  $n_1 \cdot n_2 \cdots n_k$  different ways.

innovative • entrepreneurial • global www.utm.my

**UTM**

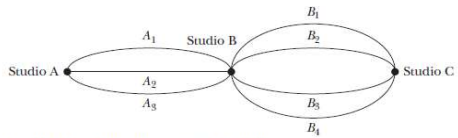

Suppose that a procedure can be broken down into two successive tasks. If there are  $n_1$  ways to do the first task and  $n_2$  ways to do the second task after the first task has been done, then there are  $n_1 n_2$  ways to do the procedure.

innovative • entrepreneurial • global www.utm.my

**UTM**

## Example 4

- Morgan is a lead actor in a new movie. She needs to shoot a scene in the morning in studio A and an afternoon scene in studio C. She looks at the map and finds that there is no direct route from studio A to studio C. Studio B is located between studios A and C. Morgan's friends Brad and Jennifer are shooting a movie in studio B. There are three roads, say  $A_1$ ,  $A_2$ , and  $A_3$ , from studio A to studio B and four roads, say  $B_1$ ,  $B_2$ ,  $B_3$ , and  $B_4$ , from studio B to studio C. In how many ways can Morgan go from studio A to studio C and have lunch with Brad and Jennifer at Studio B?

**FIGURE 7.1** Routes from studio A to studio C

innovative • entrepreneurial • global www.utm.my

**UTM**

- There are 3 ways to go from studio A to studio B and 4 ways to go from studio B to studio C.
  - $T_1 = 3$
  - $T_2 = 4$
- The number of ways to go from studio A to studio C via studio B is  $3 \times 4 = 12$ .

innovative • entrepreneurial • global www.utm.my

**UTM**

## Example 5

- The letters A, B, C, D, and E are to be used to form strings of length 4.
- How many strings can be formed if we do not allow repetitions?
- For example:
  - BADE, ACBD, AEBC ..

innovative • entrepreneurial • global www.utm.my

**UTM**

- $T_1$ : choose the first letter → 5 ways
- $T_2$ : choose the second letter → 4 ways
- $T_3$ : choose the third letter → 3 ways
- $T_4$ : choose the fourth letter → 2 ways
- There are  $5 \cdot 4 \cdot 3 \cdot 2 = 120$  strings.

innovative • entrepreneurial • global www.utm.my

**UTM**

### Example 6

- The letters *A, B, C, D,* and *E* are to be used to form strings of length 4.
- How many strings can be formed if we allow repetitions?
- For example:
  - *BABB, AABB, ACEE ..*

innovative • entrepreneurial • global [www.utm.my](http://www.utm.my)

**UTM**

- $T_1$ : choose the first letter → 5 ways
- $T_2$ : choose the second letter → 5 ways
- $T_3$ : choose the third letter → 5 ways
- $T_4$ : choose the fourth letter → 5 ways
- There are  $5.5.5.5 = 625$  strings.

innovative • entrepreneurial • global [www.utm.my](http://www.utm.my)

**UTM**

### Example 7

- The letters *A, B, C, D,* and *E* are to be used to form strings of length 4.
- How many strings begin with *A*, if repetitions are not allowed?
- For example:
  - *ADEC, ACBD, AEBC ..*

innovative • entrepreneurial • global [www.utm.my](http://www.utm.my)

**UTM**

- $T_1$ : choose the first letter → *A* (1 way)
- $T_2$ : choose the second letter → 4 ways
- $T_3$ : choose the third letter → 3 ways
- $T_4$ : choose the fourth letter → 2 ways
- There are  $1.4.3.2 = 24$  strings.

innovative • entrepreneurial • global [www.utm.my](http://www.utm.my)

**UTM**

### Exercise

- Danial, Kenny and Joseph are fighting over a turn to play a game that can only has 2 players at a time. In how many ways can we select 2 players at a time?
- Diana, Sherry, Devi and Mary are going to DSI using a motorcycle. In how many ways can we select 2 peoples to ride the motorcycle?

innovative • entrepreneurial • global [www.utm.my](http://www.utm.my)

**UTM**

### Exercise - Solution

- In how many ways can we select 2 players at a time?
  - To select 1<sup>st</sup> player
    - 3 ways
  - To select 2<sup>nd</sup> player
    - 2 ways
  - The number of ways
    - $3 \cdot 2 = 6$  ways
- The possible order:
 

| Player 1 | Player 2 |
|----------|----------|
| Danial   | Kenny    |
| Danial   | Joseph   |
| Kenny    | Joseph   |
| Kenny    | Danial   |
| Joseph   | Kenny    |
| Joseph   | Danial   |

innovative • entrepreneurial • global [www.utm.my](http://www.utm.my)

**UTM**

In how many ways can we select 2 people to ride the motorcycle?

- To select 1<sup>st</sup> rider
  - 4 ways
- To select 2<sup>nd</sup> rider
  - 3 ways
- The number of ways
  - $4 \cdot 3 = 12$  ways

The possible order

| Rider 1 | Rider 2 |
|---------|---------|
| Diana   | Sherry  |
| Diana   | Devi    |
| Diana   | Mary    |
| Sherry  | Diana   |
| Sherry  | Devi    |
| Sherry  | Mary    |
| Devi    | Diana   |
| Devi    | Sherry  |
| Devi    | Mary    |
| Mary    | Diana   |
| Mary    | Sherry  |
| Mary    | Devi    |

innovative • entrepreneurial • global www.utm.my

**UTM**

### Exercise

- There are 8 male students and 21 female students in Discrete Structure class. Among all of them, 7 students are Chinese and the rest are Malay.
  - In how many ways can we select 2 students - a boy and a girl?
  - In how many ways can we select 2 students - a Chinese and a Malay?

innovative • entrepreneurial • global www.utm.my

**UTM**

### Exercise - Solution

- In how many ways can we select 2 students - a boy and a girl?
  - To select a boy
    - 8 ways
  - To select a girl
    - 21 ways
  - The number of ways
    - $8 \cdot 21 = 168$  ways
- In how many ways can we select 2 students - a Chinese and a Malay?
  - To select a Chinese
    - 7 ways
  - To select a Malay
    - 22 ways
  - The number of ways
    - $7 \cdot 22 = 154$  ways

innovative • entrepreneurial • global www.utm.my

**UTM**

### Exercise

- Suppose that, in order to declare a variable name in a computer language, the name must have five characters. The first character must be a letter, and the remaining characters can be letters or digits. How many different variable names are possible?

innovative • entrepreneurial • global www.utm.my

**UTM**

### Basic Counting Principles

- The counting problem that we have considered so far involved either the addition principle or the multiplication principle.
- Sometimes, however, we need to use both of these counting principles to solve a particular problem.

innovative • entrepreneurial • global www.utm.my

**UTM**

### Example 8

- How many 8-bit strings begin either 101 or 111?
  - $\underline{1} \underline{0} \underline{1} \_ \_ \_ \_ \_ \_ \_ \_ \rightarrow 2 \cdot 2 \cdot 2 \cdot 2 \cdot 2 = 32$
  - $\underline{1} \underline{1} \underline{1} \_ \_ \_ \_ \_ \_ \_ \_ \rightarrow 2 \cdot 2 \cdot 2 \cdot 2 \cdot 2 = 32$
  - $32 + 32 = 64$

innovative • entrepreneurial • global www.utm.my

**UTM**

## Example

How many bit strings of length 8 either **start with a 1** or **end with 00**?

**Task 1:** Construct a string of length 8 that starts with a 1.

There is one way to pick the first bit (1),  
two ways to pick the second bit (0 or 1),  
two ways to pick the third bit (0 or 1),  
:  
:  
two ways to pick the eighth bit (0 or 1).

**Product rule:** Task 1 can be done in  $1 \cdot 2^7 = 128$  ways.

innovative • entrepreneurial • global www.utm.my

**UTM**

## Example (cont.)

**Task 2:** Construct a string of length 8 that ends with 00.

There are two ways to pick the first bit (0 or 1),  
two ways to pick the second bit (0 or 1),  
:  
:  
two ways to pick the sixth bit (0 or 1),  
one way to pick the seventh bit (0), and  
one way to pick the eighth bit (0).

**Product rule:** Task 2 can be done in  $2^6 = 64$  ways.

innovative • entrepreneurial • global www.utm.my

**UTM**

## Example (cont.)

Since there are **128 ways** to do **Task 1** and **64 ways** to do **Task 2**, does this mean that there are 192 bit strings either starting with 1 or ending with 00?

No, because here **Task 1** and **Task 2** can be done **at the same time**.

When we carry out **Task 1** and create strings starting with 1, some of these strings end with 00.

Therefore, we sometimes do Tasks 1 and 2 at the same time, so **the sum rule does not apply**.

innovative • entrepreneurial • global www.utm.my

**UTM**

## Example (cont)

If we want to use the sum rule in such a case, we have to subtract the cases when **Tasks 1** and **2** are done at the same time.

How many cases are there, that is, how many strings **start with 1 and end with 00**?

There is one way to pick the first bit (1),  
two ways for the second, ..., sixth bit (0 or 1),  
one way for the seventh, eighth bit (0).

**Product rule:** In  $2^5 = 32$  cases, Tasks 1 and 2 are carried out at the same time.

innovative • entrepreneurial • global www.utm.my

**UTM**

## Example (cont)

Since there are **128 ways** to complete **Task 1** and **64 ways** to complete **Task 2**, and in **32** of these cases **Tasks 1 and 2** are completed at the same time, there are

$$128 + 64 - 32 = 160 \text{ ways to do either task.}$$

innovative • entrepreneurial • global www.utm.my

**UTM**

## Example 9

- The following items are available for breakfast.
  - 4 types of cereal
  - 2 types of juice
  - 3 types of bread
- How many ways a breakfast can be prepared if exactly 2 items are selected from 2 different groups?

innovative • entrepreneurial • global www.utm.my

**UTM**

- A breakfast can be prepared in either of the following 3 ways:
  - A cereal & a juice
    - $4 \cdot 2 = 8$
  - A cereal & a bread
    - $4 \cdot 3 = 12$
  - A juice & a bread
    - $2 \cdot 3 = 6$
- $8+12+6=26$  ways

innovative • entrepreneurial • global www.utm.my

**UTM**

innovative • entrepreneurial • global www.utm.my

**UTM**

### Example 10

A six-person committee composed of Aina, Wan, Chan, Tan, Syed and Helmi is to be selected to hold as a chairperson, secretary, and treasurer.

- In how many ways can this be done?
- In how many ways can this be done if either Aina or Wan must be chairperson?
- In how many ways can this be done if Syed must hold one of the position?
- In how many ways can this be done if Tan and Helmi must hold any position?

innovative • entrepreneurial • global www.utm.my

**UTM**

### Example 10 - Solution

- In how many ways can this be done?
  - Select the chairperson (6 ways)
  - Select the secretary (5 ways)
  - Select the treasurer (4 ways)
  - $6 \cdot 5 \cdot 4 = 120$

innovative • entrepreneurial • global www.utm.my

**UTM**

- In how many ways can this be done if either Aina or Wan must be chairperson?
  - If Aina is chairperson  $5 \cdot 4 = 20$
  - If Wan is chairperson  $5 \cdot 4 = 20$
  - $20+20 = 40$

innovative • entrepreneurial • global www.utm.my

**UTM**

- OR
  - ✓ Select the chairperson (2 ways)
  - ✓ Select the secretary (5 ways)
  - ✓ Select the treasurer (4 ways)
  - ✓  $2 \cdot 5 \cdot 4 = 40$

innovative • entrepreneurial • global www.utm.my

- In how many ways can this be done if Syed must hold one of the position?
  - If Syed is chairperson  $5 \cdot 4 = 20$
  - If Syed is secretary  $5 \cdot 4 = 20$
  - If Syed is treasurer  $5 \cdot 4 = 20$
  - $20 + 20 + 20 = 60$

innovative • entrepreneurial • global www.utm.my

- OR
  - Assign Syed for any position is 3 ways
  - Fill the highest remaining position is 5 ways
  - Fill the last position is 4 ways
  - $3 \cdot 5 \cdot 4 = 60$

innovative • entrepreneurial • global www.utm.my

- In how many ways can this be done if Tan and Helmi must hold any position?
  - Assign Tan - 3 ways
  - Assign Helmi - 2 ways
  - Fill the remaining position - 4 ways
  - $3 \cdot 2 \cdot 4 = 24$

innovative • entrepreneurial • global www.utm.my

### Exercise

- How many eight-bit strings have either the second or the fourth bit 1 (or both)?
- How many license plates of 2 letters from A to Z, followed by 3 digits from 0 to 9 can be made, if repetition of letters is not allowed?

innovative • entrepreneurial • global www.utm.my

### Exercise

- How many 5-digit telephone numbers can be constructed using digit 0-9 if each number starts with 67 and no digit appears more than once?

innovative • entrepreneurial • global www.utm.my
