# Finite Automata

## Deterministic Finite Automata (DFA)

- In computer science, we study different types of computer languages, such as Basic, Pascal, and C++.
- We will discuss a type of a language that can be recognized by special types of machines.

## Deterministic Finite Automata (DFA)

- A deterministic finite automaton (pl. automata) is a mathematical model of a machine that accepts languages of some alphabet.

- Deterministic Finite Automaton is a quintuple

$$M = \{ S, I, q_0, f_s, F \}$$

where,

$S$  is a finite nonempty set of states

$I$  is the input alphabet (a finite nonempty set of symbols)

$q_0$  is the initial state

$f_s$  is the state transition function

$F$  is the set of final states, subset of  $S$ .

- Let  $M = \{ \{q_0, q_1, q_2\}, \{0, 1\}, q_0, f_s, \{q_2\} \}$

where  $f_s$  is defined as follows:

$$f_s(q_0, 0) = q_1, \quad f_s(q_1, 1) = q_2$$

$$f_s(q_0, 1) = q_0, \quad f_s(q_2, 0) = q_0$$

$$f_s(q_1, 0) = q_2, \quad f_s(q_2, 1) = q_1$$

- Note that for  $M$ :  
 $S = \{q_0, q_1, q_2\}$ ,  $I = \{0, 1\}$ ,  $F = \{q_2\}$   
 $q_0$  is the initial state

- The state transition function of a DFA is often described by means of a table, called a **transition table**.

$f_s$	0	1
$q_0$	$q_1$	$q_0$
$q_1$	$q_2$	$q_2$
$q_2$	$q_0$	$q_1$

## example

- The transition diagram of this DFA is,

Each state represented by a small circle labeled with the state

Initial state with incoming unlabeled arrow not originating from any vertex

Final state with a double circle

prepared by Razana Alwee

Let  $M = (\{q_0, q_1, q_2, q_3\}, \{a, b\}, q_0, f_s, \{q_1, q_2\})$   
where  $f_s$  is given by the table

$f_s$	a	b
$q_0$	$q_0$	$q_1$
$q_1$	$q_0$	$q_2$
$q_2$	$q_0$	$q_3$
$q_3$	$q_3$	$q_3$

- The transition diagram of this DFA is,

prepared by Razana Alwee

## Deterministic Finite Automata (DFA)

- Let  $M = \{ S, I, q_0, f_s, F \}$  be a DFA and  $w$  is an input string,
- $w$  is said to be accepted by  $M$  if
$$f_s^*(q_0, w) \in F$$
- $f_s^*$  - extended transition function for  $M$

## example

$w = abb$

$q_0 \xrightarrow{a} q_0 \xrightarrow{b} q_1 \xrightarrow{b} q_2$

accepted  
by M

## example

w= abba

not accepted by M

prepared by Razana Alwee

## example

- What are the states of M?  $q_0, q_1, q_2$
- Write the set of input symbols.  $I = \{0, 1\}$
- Which is the initial state?  $q_0$

prepared by Razana Alwee

## example

- Write the set of final states.

$$F = \{q_2\}$$

- Write the transition table for this DFA

The transition table,  $f_s$

$f_s$	0	1
$q_0$	$q_0$	$q_1$
$q_1$	$q_2$	$q_1$
$q_2$	$q_0$	$q_1$

**UTM**  
UNIVERSITI TEKNOLOGI MALAYSIA

[www.utm.my](http://www.utm.my)

example

Which of the strings are accepted by M?

0111010,      00111,      111010,

0100,      1110

prepared by Razana Alwee

## example

0111010

$q_0 \xrightarrow{0} q_0 \xrightarrow{1} q_1 \xrightarrow{1} q_1 \xrightarrow{0} q_2 \xrightarrow{1} q_1 \xrightarrow{0} q_2$

accepted by M

## example

00111

$q_0 \xrightarrow{0} q_0 \xrightarrow{0} q_0 \xrightarrow{1} q_1 \xrightarrow{1} q_1 \xrightarrow{1} q_1$

not accepted by M

## example

111010

$q_0 \xrightarrow{1} q_1 \xrightarrow{1} q_1 \xrightarrow{1} q_1 \xrightarrow{0} q_2 \xrightarrow{1} q_1 \xrightarrow{0} q_2$

accepted by M

## example

0100

$q_0 \xrightarrow{0} q_0 \xrightarrow{1} q_1 \xrightarrow{0} q_2 \xrightarrow{0} q_0$

not accepted by M

## example

1110

$q_0 \xrightarrow{1} q_1 \xrightarrow{1} q_1 \xrightarrow{1} q_1 \xrightarrow{0} q_2$

accepted by M

Construct a state transition diagram of a DFA that accepts on  $\{a,b\}$  that contain an even number of a's and an odd number of b's.

Example of accepted strings:

aab, baa, baaabba

4 states,

$q_0$	even num. of a's & even num. of b's.
$q_1$	even num. of a's & odd num. of b's.
$q_2$	odd num. of a's & odd num. of b's.
$q_3$	odd num. of a's & even num. of b's.

$$S = \{q_0, q_1, q_2, q_3\}$$

set of states,  $S = \{q_0, q_1, q_2, q_3\}$

set of input symbols,  $I = \{a, b\}$

initial state,  $q_0$

final state,  $q_1$

## State transition function

$f_s$	a	b
$q_0$	$q_3$	$q_1$
$q_1$	$q_2$	$q_0$
$q_2$	$q_1$	$q_3$
$q_3$	$q_0$	$q_2$

## State transition diagram

prepared by Razana Alwee

Let  $M=(S, I, q_0, f_s, F)$  be the DFA such that  $S=\{q_0, q_1, q_2\}$ ,  $I=\{a, b\}$ ,  $F=\{q_2\}$ ,  $q_0$ =initial state, and  $f_s$  is given by,

$f_s$	a	b
$q_0$	$q_0$	$q_1$
$q_1$	$q_2$	$q_1$
$q_2$	$q_2$	$q_0$

Draw the state diagram of M.

Which of the strings  
**abaa, bbbabb, bbbaa dan  
bababa**

are accepted by M?

The transition diagram of M is,

Construct the transition table of M.

Which of the strings

baba, baab, abab dan abaab

are accepted by M?

prepared by Razana Alwee

**UTM**  
UNIVERSITI TEKNOLOGI MALAYSIA

[www.utm.my](http://www.utm.my)

## exercise

- Construct a state transition diagram of a DFA  $M$  with the input set  $\{0,1\}$  such that  $M$  accepts only the string 101.

prepared by Razana Alwee

## Exercise

- Construct a deterministic finite automaton (DFA) that accepts the set of all bit strings that contain string '0101'.

## Exercise

- Construct a deterministic finite automaton (DFA) that accepts all string over  $\{a,b\}$  that contain  $ab$  and end in  $bbb$

## Finite State Machines (FSM)

- Automata with input as well as output.
- Every state has an input and corresponding to the input the state also has an output.
- These types of automata are commonly called **finite state machines**.

## Finite State Machines (FSM)

- A finite state machine is a sextuple,  
 $M = \{ S, I, O, q_0, f_s, f_o \}$   
where,  
 $S$  is a finite nonempty set of states  
 $I$  is the input alphabet  
 $O$  is the output alphabet  
 $q_0$  is the initial state  
 $f_s$  is the state transition function  
 $f_o$  is the output function.

- Let  $M = \{ S, I, O, q_0, f_s, f_o \}$  be the FSM
- where,
  - $S = \{q_0, q_1, q_2\},$
  - $I = \{a, b\},$
  - $O = \{0, 1\},$
  - $q_0 =$  initial state,

$f_s$  and  $f_o$

	$f_s$		$f_o$	
	a	b	a	b
$q_0$	$q_1$	$q_0$	0	1
$q_1$	$q_2$	$q_2$	1	0
$q_2$	$q_0$	$q_1$	0	1

## example

prepared by Razana Alwee

## example

Input string: bbab

Output string: 1100

Output: 0

prepared by Razana Alwee

## example

Input string: bababaa

Output string: 1000101

Output: 1

prepared by Razana Alwee

- Let  $M = \{ S, I, O, q_0, f_s, f_o \}$  be the FSM
- where,  
 $S = \{q_0, q_1, q_2, q_3\}$ ,  
 $I = \{a, b\}$ ,  
 $O = \{0, 1\}$ ,  
 $q_0$  = initial state,

■  $f_s$  and  $f_o$

	$f_s$		$f_o$	
	a	b	a	b
$q_0$	$q_0$	$q_2$	0	1
$q_1$	$q_1$	$q_2$	1	0
$q_2$	$q_3$	$q_1$	1	1
$q_3$	$q_3$	$q_3$	1	1

prepared by Razana Alwee

- Draw the transition diagram of M.

prepared by Razana Alwee

## example

- What is the output string if the input string is *abbabab*?

abbabab

Output string: 0111011

prepared by Razana Alwee

- What is the output of *abbabab*?

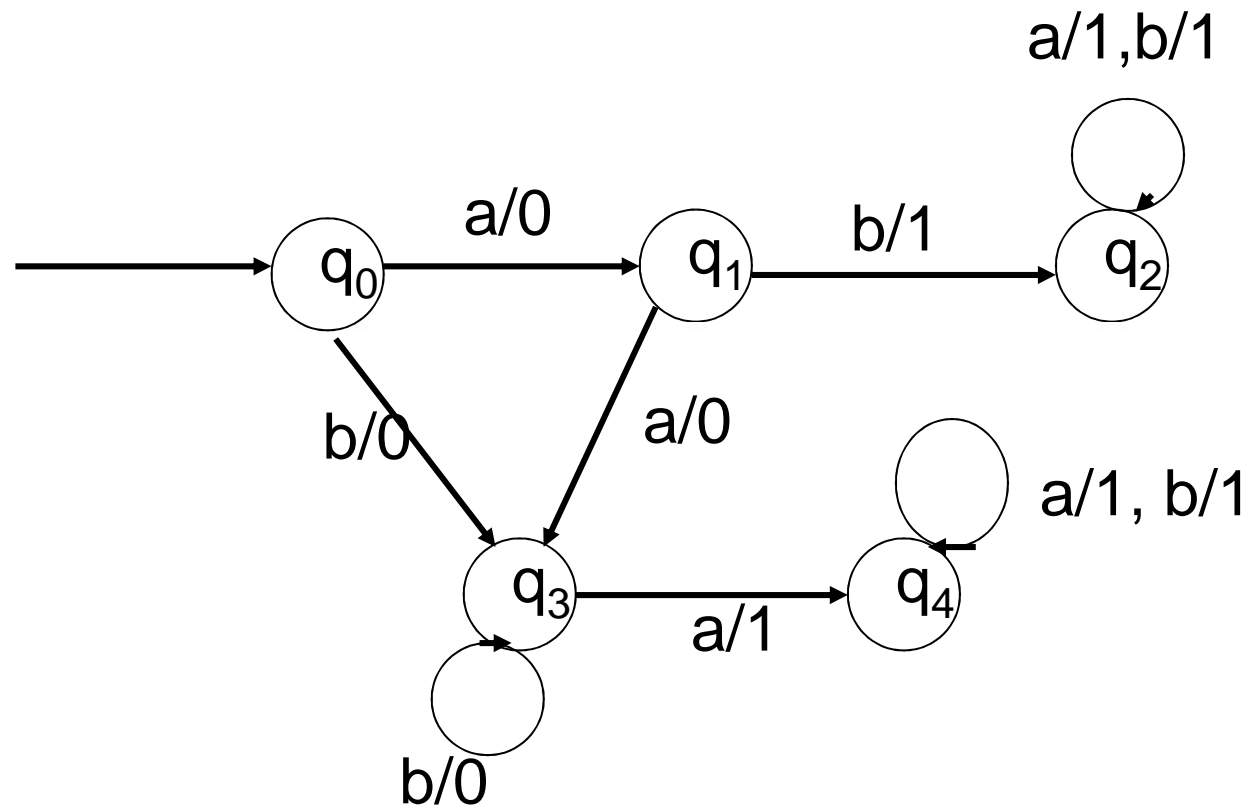

Output: 1

## Finite State Machines (FSM)

- Let  $M$  be a FSM.
- Let  $x$  be a nonempty string in  $M$ .
- We say that  $x$  is accepted by  $M$  if and only if the output of  $x$  is 1.

## example

prepared by Razana Alwee

- Write the transition table of M.
- What is the output string if the input string is *aaabbbb*?
- What is the output if the input string is *bbbbaaaa*?

**UTM**  
UNIVERSITI TEKNOLOGI MALAYSIA

[www.utm.my](http://www.utm.my)

example

- Is the string *aaa* accepted by M?
- Which of the strings  
*ba, aabbba, bbbb, aaabbbb*  
are accepted by M?

prepared by Razana Alwee

- The transition table of M.

	$f_s$		$f_o$	
	a	b	a	b
$q_0$	$q_1$	$q_3$	0	0
$q_1$	$q_3$	$q_2$	0	1
$q_2$	$q_2$	$q_2$	1	1
$q_3$	$q_4$	$q_3$	1	0
$q_4$	$q_4$	$q_4$	1	1

prepared by Razana Alwee

- What is the output string if the input string is *aaabbbb*?

aaabbbb

Output string: 0011111

a/1, b/1

prepared by Razana Alwee

- What is the output if the input string is *bbbaaaa*?

bbbaaaa

Output: 1

prepared by Razana Alwee

**UTM**  
UNIVERSITI TEKNOLOGI MALAYSIA

[www.utm.my](http://www.utm.my)

example

- Is the string *aaa* accepted by M?

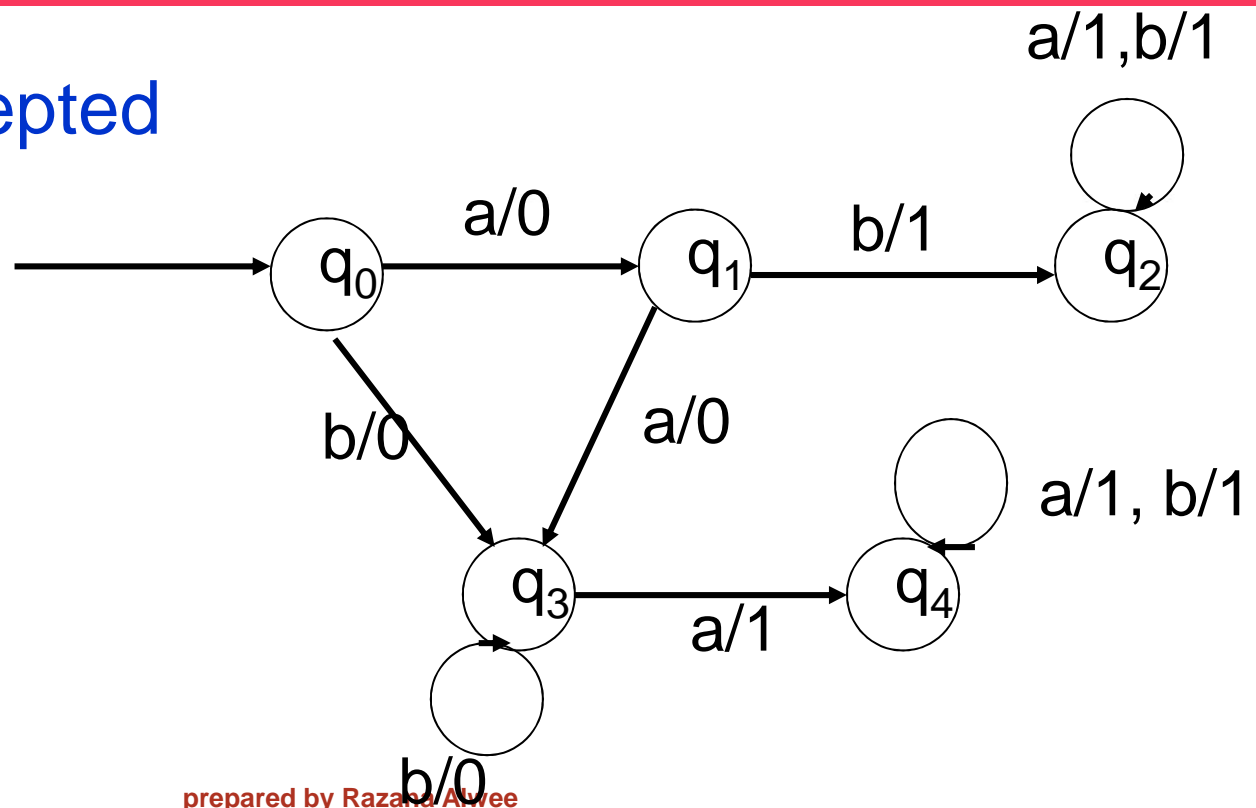

prepared by Razana Alwee

aaa

$q_0 \xrightarrow{a} q_1 \xrightarrow{a} q_3 \xrightarrow{a} q_4$   
0            0            1

Output: 1, accepted

prepared by Razana Alwee

**UTM**  
UNIVERSITI TEKNOLOGI MALAYSIA

[www.utm.my](http://www.utm.my)

example

- Which of the strings  
*ba, aabbba, bbbb, aaabbbb*  
are accepted by M?

prepared by Razana Alwee

ba

$$\begin{array}{ccccc} q_0 & \xrightarrow{b} & q_3 & \xrightarrow{a} & q_4 \\ & 0 & & 1 & \end{array}$$

Output: 1, accepted

prepared by Razana Alwee

aabbba

Output: 1, accepted

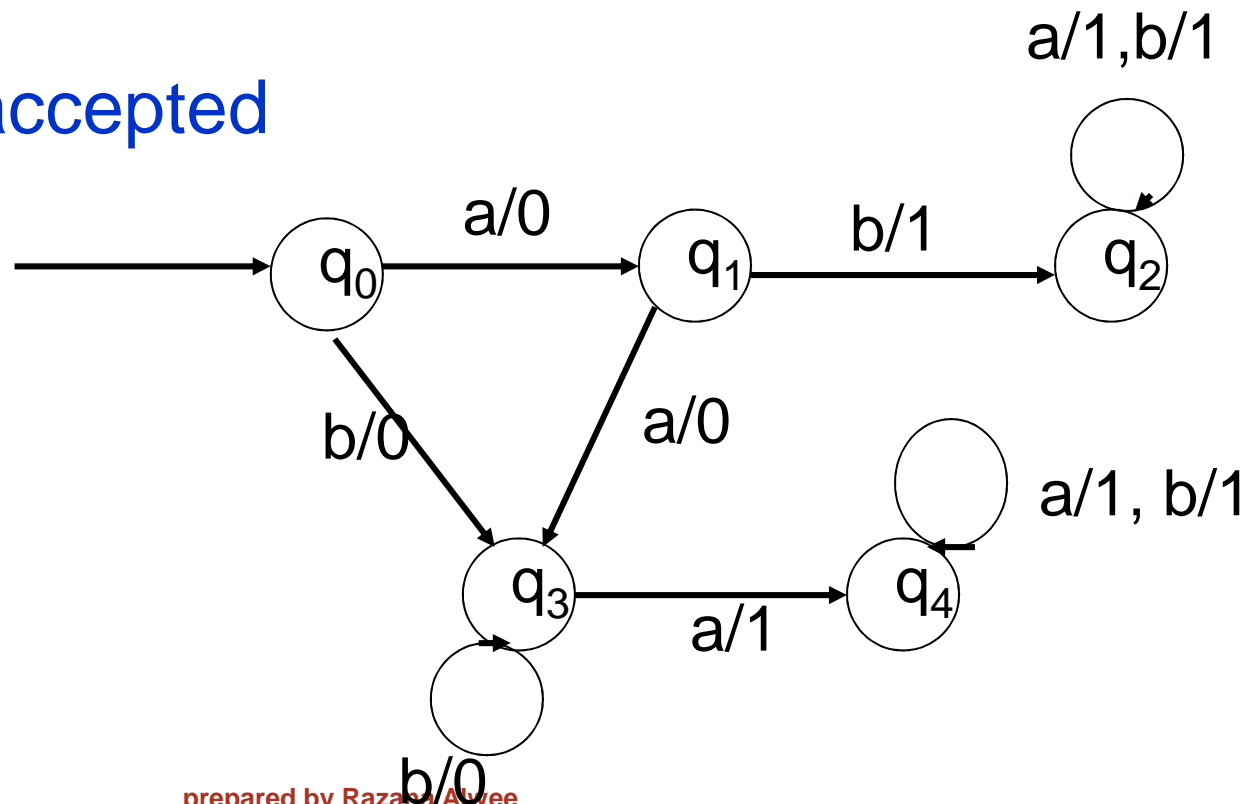

prepared by Razana Alwee

bbbb

Output: 0, not accepted

prepared by Razana Alwee

aaabbbb

Output: 1, accepted

**UTM**  
UNIVERSITI TEKNOLOGI MALAYSIA

[www.utm.my](http://www.utm.my)

## example

- Consider a vending machine that sells candy and the cost of a candy is 50 cents.
- The machine accepts any sequence of 10-, 20-, or 50 cent coins.
- After inserting at least 50 cents, the customer can press the button to release the candy.

prepared by Razana Alwee

- If the customer inputs more than 50 cents, the machine does not return the change.
- After selling the candy, the machine returns to initial state.
- Construct a finite state machine that models this vending machine.

**UTM**  
UNIVERSITI TEKNOLOGI MALAYSIA

[www.utm.my](http://www.utm.my)

example

States,

$q_0$ , initial state (0)

$q_1$ , 10 cents

$q_2$ , 20 cents

$q_3$ , 30 cents

$q_4$ , 40 cents

$q_5$ ,  $\geq 50$  cents

prepared by Razana Alwee

**UTM**  
UNIVERSITI TEKNOLOGI MALAYSIA

[www.utm.my](http://www.utm.my)

example

$S = \{q_0, q_1, q_2, q_3, q_4, q_5\},$

$I = \{10, 20, 50, B\},$

$O = \{0, 1\},$

$q_0 = \text{initial state},$

prepared by Razana Alwee

## example

	$f_s$				$f_o$			
	10	20	50	B	10	20	50	B
$q_0$	$q_1$	$q_2$	$q_5$	$q_0$	0	0	0	0
$q_1$	$q_2$	$q_3$	$q_5$	$q_1$	0	0	0	0
$q_2$	$q_3$	$q_4$	$q_5$	$q_2$	0	0	0	0
$q_3$	$q_4$	$q_5$	$q_5$	$q_3$	0	0	0	0
$q_4$	$q_5$	$q_5$	$q_5$	$q_4$	0	0	0	0
$q_5$	$q_5$	$q_5$	$q_5$	$q_0$	0	0	0	1

prepared by Razana Alwee

## example

prepared by Razana Alwée
