

REFLECTION

After I have completed this project with my teammates, I have gained so much knowledge and experiences regarding on how one product is made. The purpose of this project is to go through the manufacturing process of the product that my group and I have chosen with what I have learnt in class. The project that has been assigned to us need to start from raw materials to a full development of product. This manufacturing project has help me understand in detail about all the manufacturing processes that have been taught in class by Dr. Norhayati Mohmad Zakwan @ Zakuan such as Metal Forming, Casting, Joining, Polymers and others. This because I have to implement all the knowledge gain during the lectures, finding extra information form the internet and also go through self-studies to complete this project with success. After all, time management and teamwork from each one of us also help to complete this project smoothly. In conclusion, what my group and I have learnt in Manufacturing Technology class really help us to understand and complete this project.
