Common Presentation {general introduction} A benefit industrial has been conducted by the speaker Saad Kabir Uddin On Tuesday, December 29th, the talk was hold by zoom organized through technology and Information System (TIS) lecturers the reason of talk is to help student in real life internship as conducted the Mechanical Conversation in the real factories or companies regarding to (IT) once more, which is the third Industrial Talk. But there was a contrast from the past IT. Within the past IT, we were displayed with one speaker. But in this third IT, we were displayed with 4 distinctive speakers from distinctive companies, a nd all of them are Graduated class of UTM. They are Batrisyia, Binti, Azman, and Shah.

Shah as of now works in TM One company like Social Media Information Examiner, Mohamad Zamarul Akmal canister Mohd Hussin in PPG Coatings company as an Information Design, and Teo Wen Long as a Computer program Design in Qumon Insights, and Tan Yong Keong who work in Micron Semiconductor Asia as an Information Science Build. Guided by the senior teacher within the School of Computing UTM, Dr. Johanna Ahmad as an arbitrator, this IT takes up Rousing Work Involvement

How to build yourself during this pandemic
HASHED MOQBEL AL-NAEEM
  CITY –More likely than not 2020 will be recognized as a year loaded up with difficulties, anguish, additional opportunities, and a feeling of globality – we were, all things considered, 'stuck in this together'. Now and again, this year has left us puzzled. Although because of the impacts of COVID-19, uncertainty exists in many ways, it is a great chance to gain skills in software engineering, technology, communication. Because just fundamental skills from university life won't help much.

Caption-Arial, 8, single line.

There are many free online platforms like – edex, code camp etc. to learn new software and technical skills. It is also very important to adapt the communication skills and teamwork skills to adjust in the future professional life as one is getting into it after graduating. There is happening many online competitions about software skills and tech skills. By participating in these competitions one can gain experience to add it to their resume also it will help to practice how to present your idea or work to other people. That will also help you to gain confidence during the interview sessions while getting into professional life

In a particular way, final-year is very important and it plays out differently for all the students. To make the best out of it, it is very important to stay motivated and gaining new skills by making the best use of the time.

Work Life or Student Life
Hashed MOQBEL AL-NAEEM
  VERONA – Students face a lot of challenges time to time when entering the work life. Finding the right opportunities and moving forward to work life and adjusting with the new environment, finding suitable and helpful supervisors are all the main concern for graduates as they enter their professional lives. As in the Alumni sharing session all the three graduates and new bee shared their experiences about their work life. As work life is tougher than student life it is normal that making a little mistake makes one's future career vulnerable when in student life by making mistakes one can learn from their mistakes. So their common suggestion was to try to discipline one's life to minimize the mistakes from happening in the future. During the pandemic even though it is difficult to find one's own angle there are many opportunities through online to enhance one's tech skills, coding skills and communication skills to find their passion and find a better job in the future.

and Covid 19 Widespread Challange as a topic. Very diverse from the past IT one, this IT leads more on QnA between the arbitrator and the speaker. This conversation went on for around an hour, beginning at 10.00 AM MYT Shah as of now works in TM One company like Social Media Information Examiner, Mohamad Zamarul Akmal container Mohd Hussin in PPG Coatings company as an Information Design, and Teo Wen Long as a Program Design in Qumon Insights, and Tan Yong Keong who work in Micron Semiconductor Asia as an Information Science Design. Guided by senior Finally Ms. Johanna started a Q&A session where they took questions from the students some of the questions the students asked were

What CGPA did the seniors get in their BSc?
What they do in their free time?
What programming language is mostly used in real life jobs?
Is there a chance that when we graduate we might end up working in a career different than the one we studied in the university?
What were their experience in the first year in the university?
After the seniors answered most of the questions asked by the students. Ms. Johanna marked the end of the talk and asked each one of the seniors to give their last words.

Is CGPA Important? Tips to stay motivated in this pandemic
ALBARA HNSHAL

VERONA – Many students from first year to final year have the same question that "Is CGPA important for getting jobs?" And "What minimum CGPA is required to get a decent job?". While answering the question, the graduates mentioned that CGPA is not that important to get a job. The private companies mostly look for the software and technical skills you have. CGPA is just a criteria to filter out the candidates. The things they look for is a good speaking and communication skills along with good soft and technological skills.

When the graduates were asked that how they stayed motivated during this pandemic and got their desired jobs or internship they all said the common thing that you need to do whatever you love. You need to find the reason for your studies and hard work even if its for maintaining the quality of life.If you want to contribute something to the world it is very important that you stay focused in what you are doing.

To conclude, we all must remember that we are in the same situation in this pandemic.Although this has a impact on our outlook and opportunities in the graduating years or other semester students, we are in this together and we have to learn and enhance our skills to create opportunities for us in the best way possible.

THE purpose behind the webinar
Amine Imazzi

The reason for Industrial Talk 3 was to persuade understudies through an meet with previous understudies who had examined at the UTM college. For case, the understudy. Tan Yong Keong he enjoyed competitions and utilized to compete in any competition in his field at the college to fortify his aptitudes, he worked for one and half year as Information Science Building in Singapore. Qistina worked at TM One company in Kuala Lumpur as a social information investigator. Mohamad Zamarul Working in information building in PPG Coatings. Each one of them told their rousing story of how and when he got the work. Typically truly a catalyst, which will thrust a parcel of understudies to endeavor to induce what they want.

Tan Yong Keong said that what persuades him to proceed is that he needs to proceed and design something that makes a difference in science and the world to create. Mohamad Zamarul said he likes to progress himself by learning unused abilities each day, and typically what drives him to keep going and not coming up short in his work. With respect to
