**TASK 6B: INDIVIDUAL REPORT**

**Name**

SITI NAJWA BINTI APANDI (A19EC0163)

**Group's Name**

WARA

**Group's Members**

NOOR FARAHDIBA BINTI IDRIS (A19EC0198)

SAAD KABIR UDDIN (A19EC4056)

**Section**

08

**Lecturer's Name**

DR JOHAN BIN MOHAMAD SHARIF

## **Group members**

My group's name is WARA. At first, my group members only consist of two students which is Noor Farahdiba and me. We work together to complete the project for task 1 until task 4. But, on 28 December 2020, another team member, Saad Kabir Uddin has joined our group. Therefore, he just contributes in our project for task 5 and task 6 only.

## **Team members' contribution and how we work as a group**

- **My contribution**

As a team, we try our best to work together in order to finish the task. We can contribute well although we just discussing in virtual due to this pandemic. As I mention earlier, only Farah and me has working on for project task 1 until task 4. For me, I have contributed well for our project and think the problem together with my partner. To make it fair, we have divide our work and each member have to complete our own part. However, there is some situation where we did not divide the work. After discussing on how to do the task, we usually just help each other to complete the report together in Google Docs. We try to solve the problem together and cover the part which did not have complete yet. Although we did not divide the work, I still do my job to finish the report and not let my partner do it alone.

- **Other members' contribution**

Farah has done her job very well. We are not too smart to make the project report perfectly but Farah has try her best to contribute in project work and get some information to understand more about the project. She is the one who will provide the template of report in Google Docs and share the link to me for completing the report. After done finishing the report, she will compile the work and make it pdf format to submit the report in e-learning.

Since Saad just joined our team, I cannot see how much his effort for group project. He only start working on for project task 5 which is about IP addressing scheme. For task 5, he did not contribute too much for getting an idea. Most of the report for task 5 is come from me and Farah has given some idea and opinion which can help me a lot to do the task. Two days before the due date of task 5, he was asking about what is the

main question of task 5. I have no idea what he did all this time after we start our discussion.

## **Reflection**

- **What you have learned from working as a group**

From this project, I have learned that cooperation is very important in group work. I have to make sure that I contribute enough for group project because at the end of the project, we will get the same mark. If I am not cooperating well, it may affect our project and the report cannot be done on time. Although we have divide the task to do our own part, I should help my teams if they have problem with their part and vice versa. Without a good cooperation, we may not able to complete our task.

- **What you have learned from doing the project**

I have learned that we should not just depend on what we learn in class. In class, we only learn the basic things about the topic to get us an idea what the lesson is about. To get more understanding about the topic, we should do more research on trustful website. There is a lot of information we can get in Internet. So there is no excuse to not do the project just because we did not understand the question. From this project, I have got more knowledge and understand about networking due to more research and learning.

## **Comments and suggestions**

I think this project is good for me because I get more knowledge in networking and understand how the computer work within this network. Since the lecturer let us to choose out team member, I can pick my friend who can cooperate well with me, hence we did not have any problem with group work. For suggestion, I think that the lecturer should brief every task in project so that we got an idea how to do the task. Sometimes, I cannot understand what the questions ask and have to read many time before ask the lecturer or friends.
