

## 1. Gig Economy

Gig economy, temporary, flexible jobs are commonplace and companies tend toward hiring independent contractors and freelancers instead of full-employees. The traditional full-time workers been replaced by gig economy since there are a lot of benefit using it rather than hiring employee for a lifetime career. One of the reason gig economy becoming popular is the employers usually cannot afford to hire full-time employees.

## 2. Big Data

Big Data is term that describe a large volume of data. Data continues to expand day by day, and to not waste the data, we need analysis to help the companies in making good and accurate decision by using data both structured and unstructured. Poor decision making will lead a company in losing a thousand even a million ringgit. There is some of the benefits of Big Data analytics, generating customer offers based on their buying habits and increasing customer loyalty. (citation).

## 3. Automation AI

Humans are very limited, by replacing human with AI, productivity of a certain company will increase, since AI can work longer than human and it is also helping in reducing error produce by human work. Next implementation of AI will help in making faster and accurate decision.

## 4. Change Management

Change management is methods and manners if a company wanting to change or update their project. The key reason for this is when a project goes live, the user is ready and understand to use it properly. This will help the company to implement something smoothly and beneficial.

## 5. Method Melding

A project is very flexible and unique, it can come in various way. So, combining project management methodologies will come handy later. There a few benefits if we use method melding. One of the benefits is make our project team successful, since a team of a project consist different background such as inexperience and experience person. People with will have different way of understanding thing, that the reason combining methodologies is very important.

## 6. Tool and Solution

Basically, it is project planning; scheduling and time tracking. Communication and collaboration also very important. We also must consider budget and emphasize the deadline.

## 7. EQ (Emotional Quotient)

People with low EQ will be causing a lot of problems among his or her colleagues because lack of empathizing will lead to misunderstanding among them and worst-case scenario their task will be abandon.
