Abstract—This is a summary of the information given during the industrial talk which discusses project management in the IT industries. Project management is the application of knowledge and skills in conducting a project to deliver the maximum price-performance ratio of the project. Due to the development in the IT field, a new trend of project management has emerged in the IT field, known as IT project management. The IT companies are seeking the qualities of a good project manager among their employees. Therefore, the employees should harness the IT project management skills for their employability and the prosperity of their companies.

Keywords—Industrial Talk, Importance, Trending, IT Management

I. INTRODUCTION

The industrial talk titled "The Importance and Trending of IT Project Management" is organized by the Technology and Information Systems Department, School of Computing, UTM from 10 A.M. to 11 A.M. on 1st December 2020. Mr. Mohd Khairul Reeza Ruslan, the head of Project Management Office from the Commerce Dot Com Sdn. Bhd. is invited as the speaker to this talk.

II. IT PROJECT MANAGEMENT

A. The Definition of Project

A project is a specific and finite series of tasks for providing a product or service to generate the desired result within a framework defined by a reasonable time, cost, and quality[1]. In the industries, there will always be multiple projects that serve a greater goal which is planned in a program, while the program itself also serves for an even greater target proposed by a portfolio.

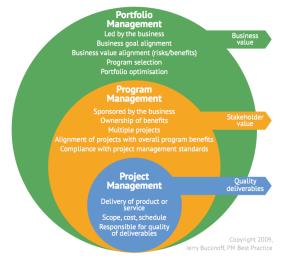

Figure 1. The relation between portfolio, program, and project.

B. The Importance of IT Project Management

Figure 2 Process of project management

With proper project management, an individual could efficiently utilize his knowledge, skills, tools, and techniques to conduct a project. Project management and helps a person to clarify the problem statement in a project and plan the solution based on the person's capability. In other words, it allows a person to evaluate the cost, time, and energy needed for the project. In this way, he could decide whether he requires extra resources to secure the benefit from the project, or tailoring the process by achieving the minimum project requirement without disregarding the project quality so the project is always cost-effective. Project management proposes the individual to keep track of the progress in the project so measures could be taken at once if any problem occurs. Eventually, it is encouraged to write documentation as the closing of the project for review and storage purposes.

C. Trending of IT Project Management

Trends	Explanation
Gig Economy	Economic system defined by the increasing demands for short-term contracts or freelance work rather than permanent jobs[2].
Big Data	Enormous data analytics to understand customer needs and detail risks for generating insight into a development project.
Artificial Intelligence	AI-powered automation is capable of performing certain tasks at maximum efficiency and accuracy.
Change Management	Flexibility in managing the project which promotes the adaptability to change.
Method Melding	The practice of the combination of multiple project management methodologies.
Tools & Solutions	The utilization of advanced project management devices in planning, executing, and monitoring the project.
Emotional Intelligence	Ability to control emotions and associate with others' emotions.
