SECTION:-76 SUB CODE: UHS1022

MATRIC CARD NO:-A20EC9107

My career goal is to turn into a successful Software Engineer. My plan is to be part of a team who creates worthwhile, efficient and useful software for consumers. I would like to work in firms of the executive specialists, programming and system houses inside huge manufactures of computing equipment or sporadically inside in major modern organizations. Achieving this goal is a long journey since I am as yet an undergraduate student however every long journey starts with a step. From this subject I know how to collaborate, how to do an assignment and what is the future of an engineer, also what needed keys for a job is and also learned the extra curriculum activities. Like How to make an animation video, how to find a problem, how to collaborate with the team member and communication with user and how to research to do something. In the design thinking process, I gained those insights from research and fieldwork in the empathies mode. In the design thinking gives me the permission to fail and to learn from my mistake, because I came up with new ideas and then recreate that but not to give up. If I want to success my goal, I should have constantly try to find new way to optimize my work for readability, performance, and maintainability, and then I have to practice a lot for making well-reasoned decisions about where to focus time and resources in my work. I might have to boost my skill in a couple of new development technologies. I have to focus the programming techniques, problem solving, and analytical skills. In the Engineering course if I work at it, which I will, will be the key to my success. From the project management session (Talk-2) I know, what is the future of a engineer, also what is needed keys for a project. As a student, I must have to know how to deal with project, and must have to increase my skill and also increased my potential for any kind of project. From industrial talk3 I learned how to get a good result as well as skills. They shared some experience of how to get a good job. Finally we learned the right way, what should we do in our study life for our better future life.
