NeatWire Company

# OUR NEW INNOVATION

---

Through extensive research and testing, our company developed a way to use Earth's own magnetic field via magneto-hydrodynamics without collisions.

"The latest technology,  
feel the sensation of  
controlling the mouse  
without causing friction,  
There are no more  
boundaries in your  
gaming world"

---

## About us

### NeatFly Hovering Mouse- 2020

Maxwell's system of equations describes his consistent collective plane created by charged plasma particles. Using water vapor in the air, our wave hover drivers can freely employ torsion frequency alpha wave parametric excitation or mega frequency to achieve this limit. The 2020 SFNS optical sensor calibrates the mouse to the desired height on any surface. Mouse continues to operate even if the surface is depleted.

**PRICE** : \$ 123.41
