

Technology is always developing

because of the rapid growth in society and pursue of knowledges by people, technology cannot be at a stagnant

An Easy Way Of Living Nowadays

Shopping, contacting, and transportation will be much more easier with the presence of computer systems

Industry 4.0

An era where human labor will be minimized by the presence of drones, robots, and computer systems

EVERYTHING WILL BE DIGITALIZED!

The biggest change in industry 4.0 is the jobs that are needed. In the past, jobs are needed from typesetter, computer operator, switchboard operator, etc. But now at the present, jobs that are needed range from biomass plant technician, digital marketing specialist, mobile app designer, etc. While some of these jobs don't really degrade in the future, there are other promising jobs that are available in the future, such as being a 3D printer technician, computer vision engineer, ethical hacker, etc.

Time to REFLECT

What is the motivation @ insights @ information did you gain from this industrial talk on how innovation in helping human life in particular aspect?

Reflection: Digitalization is essential because it increases efficiency and convenience.
