

Reflection on

Science and Technology Thinking

MD. MAHI ANAN

Metric No: A19EC4050

This reflection is about the science and technology thinking course which demonstrates the fundamentals and basic of technology thinking. We learn the history how science have developed day by days. We get the chance to learn about many new things which we didn't know before. Our honorable dr. Diyauddin helps us to make thing easy to understand. We understand each and every topic very clearly but I think if we could manage to have physical class it would be more effective.

The teaching style was so good. All the slides, exam questions were well organized and nice. We don't have to google for any information or task everything is already in the slides. Moreover, while taking class the dr. gives us many additional information.

After this course I find out that technology and thinking can be fun, profound and interesting. I really enjoyed the online course. it was well planned and set out, easy for me to follow. The work load (h.w. & test) was just enough, but I am thankful to Allah that with enough time i have finished everything, learn about the topics and not feel over loaded and rushed.

All lectures, assignments, tasks, projects and tests were straight forward. And this whole learning process assignments comes out very beneficial. Well about improvement of the course I don't have any special suggestion because the whole course was very detailed and organized but if the course would be F2F it would be better. I actually really enjoyed this course. I appreciate the effort put into the course. At the end I would like to thank to my dear lecturer, I feel so truly lucky to have a teacher who shows all of the care, understanding, and patience that you do. Thank you for everything. We really appreciate and pray for your good health.
