

Question 1

```
#include <iostream>

#include <iomanip>

#include <fstream>

using namespace std;

int main()
{
    string n, add1, add2; // to store our data
    ofstream output("address.txt"); // create a file to write to

    for (int j = 0; j < 3; j++) { // save data to file

        cout << "Enter you name : ";
        getline(cin, n);

        cout << "Enter first address : ";
        getline(cin, add1);

        cout << "Enter second address : ";
        getline(cin, add2);

        output << n << endl << add1 << endl << add2 << endl << endl;

    }
```

```
// write the salaries

output << "Monthly salary (1st): " << endl;

output << right << fixed << showpoint << setw(6) << setprecision(2);

output << "5000.47" << endl;

output << "Monthly salary (2st): " << endl;

output << right << fixed << showpoint << setw(6) << setprecision(2);

output << "900.37" << endl;

output << "Monthly salary (3st): " << endl;

output << right << fixed << showpoint << setw(6) << setprecision(2);

output << "12000.00" << endl;

return 0;

}
```
