

Commentary on Philosophy:

Philosophy is the subject that helped me to, think logically, to analyze and solve problems, the ability to assess proposed solutions, the ability to write and speak clearly, attending to details. When you learn philosophy, you gain skills in verbal and written communication, problem solving, logical and disciplined reasoning and interpretation, along with convincing argumentation.

Every Thursday I used to wake up early in the morning to attend the class of UHS1022- philosophy and Current Issues. Since my childhood I was really very curious about this subject. I had a wrong idea about the subject back then. I used to think maybe philosophy is connected with literature. But I was wrong!

What does the word philosophy means? In general view, philosophy is the relationship between people and the world. But this is not only that. Philosophy is an enormous field of discussion. There are four kinds of philosophy. Such as:

1. Theoretical Philosophy
2. Practical Philosophy
3. Logic
4. History of Philosophy.

These four fields have more sections, which are huge. People may ask the question that why do we need to study philosophy. The answer is this subject teaches us to think logically, writing clearly, reading closely, and develop our critical thinking. Philosophy is the science of sciences. Every person must have a philosophy of life. I have come to know about the philosophy about Malaysia and I also researched about my country and a little bit about Singapore. I also learnt about the philosophy of my institute, University Technology Malaysia, which inspired me a lot. My expectation towards this subject is it will prepare us for not only for examination but also to know about the real world, the relationship between people and the universe. I would like to mention that now I have a clear conception on the branches of philosophy and the importance of these in our daily life. During the course, we did complete a proposal, report and a video on our topic. Our topic was Ethical Issues at a Workplace. I got to learn about this too.

I can not help myself to stop to give a special thanks to my Professor Badlihasham Bin Mohd Nasir and my dear group members and classmates. The presentations were very informative and helped us to learn more and more. I think everyone should have a clear concept on this subject. Because this is the subject that is connected with our life.

Afifa Jumana.
