

Privacy, Security, and Ethics

Chapter 9

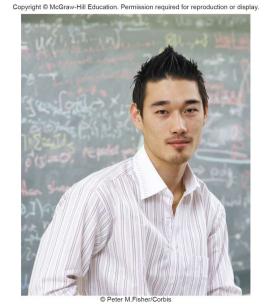

Learning Objectives

- Identify the most significant concerns for effective implementation of computer technology.
- 2. Discuss the primary privacy issues of accuracy, property, and access.
- 3. Describe the impact of large databases, private networks, the Internet, and the Web on privacy.
- 4. Discuss online identity and major laws on privacy.
- 5. Discuss cybercrimes including creation of malicious programs such as viruses, worms, Trojan horse, and zombies as well as denial of service attacks, Internet scams, identity theft, cyberbullying, rogue Wi-Fi hotspots, and data manipulation.
- 6. Detail ways to protect computer security including restricting access, encrypting data, anticipating disasters, and preventing data loss.
- 7. Discuss computer ethics including copyright law, software piracy, digital rights management, the Digital Millennium Copyright Act, as well as plagiarism and ways to identify plagiarism.

Introduction

- The ubiquitous use of computers and technology prompts some very important questions about the use of personal data and our right to privacy.
- This chapter covers issues related to the impact of technology on people and how to protect ourselves on the Web.

People

Technology has had a very positive impact on people, but some of the impact could be negative.

Most significant concerns:

 Privacy – What are the threats to personal privacy and how can we protect ourselves?

Security – How can access to sensitive information be controlled and how can we secure hardware and software?

 Ethics – How do the actions of individual users and companies affect society?

Privacy

- Privacy concerns the collection and use of data about individuals
- Three primary privacy issues:
 - Accuracy responsibility of those who collect data
 - Must be secure and correct
 - Property who owns data and who has rights to software
 - Access responsibility of those who control data and use of data

Large Databases

- Big Data is exploding and ever-growing
 - 90% of the data collected has been collected over the last 2 years
- Data collectors include
 - Government agencies
 - Telephone companies
 - Credit card companies
 - Supermarket scanners
 - Financial institutions
 - Search engines
 - Social networking sites
- Information Resellers/Brokers
 - Collect and sell personal data
 - Create electronic profiles

Large Databases (Cont.)

- Personal information is a marketable commodity, which raises many issues:
 - Collecting public, but personally identifying information (e.g., Google's Street View)
 - Spreading information without personal consent, leading to identity theft
 - Spreading inaccurate information
 - Mistaken identity
- Freedom of Information Act
 - Entitlement to look at your records held by government agencies

Private Networks

Employee monitoring software

- Employers can monitor e-mail legally
 - A proposed law could prohibit this type of electronic monitoring or at least require the employer to notify the employee first

The Internet and the Web

- Illusion of anonymity
 - People are not concerned about privacy when surfing the Internet or when sending e-mail
- When browsing the web, critical information is stored on the hard drive in these locations:
 - History Files
 - Temporary Internet Files
 - Browser cache
 - Cookies
 - Privacy Mode
 - Spyware

History Files and Temporary Internet Files

 Include locations or addresses of sites you have recently visited

Temporary Internet Files / Browser Cache

- Saved files from visited websites
- Offers quick re-display when you return to the site

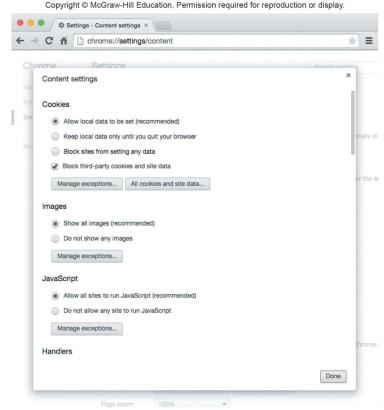

Cookies

- Cookies are small data files that are deposited on your hard disk from web sites you have visited
 - First-party cookies are generated only by websites you are visiting
 - Third-party cookies are generated by an advertising company that is affiliated with the website
 - Also known as tracking cookies that keep track of your Internet activities through 3rd party cookies
 - Refer to the accompanying graphic displaying how to block 3rd party cookies

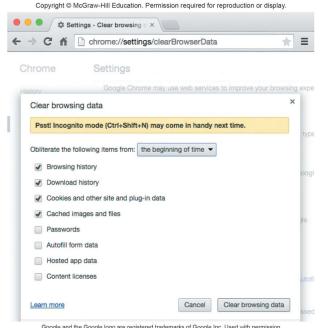

Google and the Google logo are registered trademarks of Google Inc. Used with permission

Privacy Modes

- Ensures your browsing activity is not recorded on your hard drive
 - Incognito Mode
 - Google Chrome
 - Private Browsing
 - Safari

Privacy Threats

- Web bugs
 - Invisible images or HTML code hidden within an e-mail message or web page
 - When a user opens the message information is sent back to the source of the bug
- Spyware
 - Wide range of programs that are designed to secretly record and report Internet activities, add Internet ad cookies
- Computer monitoring software
 - Invasive and dangerous
 - Keystroke Loggers
 - Record activities and keystrokes
- Anti-Spyware programs
 - Detect and remove privacy threats

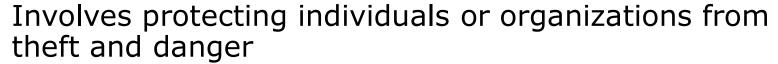

Online Identity

- The information that people voluntarily post about themselves online
- Archiving and search features of the Web make it available indefinitely
- Major Laws on Privacy
 - Gramm-Leach-Bliley Act protects personal financial information
 - Health Insurance Portability and Accountability Act (HIPAA) protects medical records
 - Family Educational Rights and Privacy Act (FERPA) resists disclosure of educational records

Security

- Hackers
 - Gain unauthorized access with malicious intent
 - Not all hackers are illegal

Cybercrime / Computer Crime

- Criminal offense that involves a computer and a network
 - Effects over 400 million people annually
 - Costs over \$400 billion each year

Forms of Computer Crime

Computer Crime	Description
Malicious programs	Include viruses, worms, and Trojan horses
DoS	Causes computer systems to slow down or stop
Rogue Wi-Fi hotspots	Imitate legitimate Wi-Fi hotspot in order to capture personal information
Data manipulation	Involves changing data or leaving prank messages
Identity theft	Is illegal assumption of a person's identity for economic gain
Internet scams	Are scams over the Internet usually initiated by e-mail and involving phishing
Cyberbullying	Is using the Internet, smartphones, or other devices to send/post content intended to hurt or embarrass another person

Malicious Programs - Malware

- Malicious Programs or Malware
 - Designed by crackers, computer criminals, to damage or disrupt a computer system
 - Computer Fraud and Abuse Act makes spreading a virus a federal offense
 - 3 most common programs
 - Viruses migrate through networks and attach to different programs
 - Worms fills the computer with selfreplicating information
 - Trojan horse programs disguised as something else
 - Zombies are computers infected by a virus, worm, or Trojan Horse

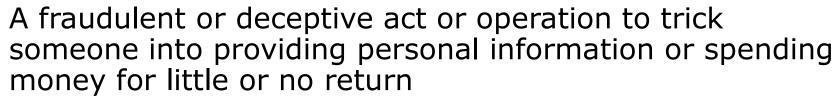

Cyber Crime

- Denial of Service
 - (DoS) attack attempts to slow down or stop a computer system or network by flooding it with requests for information or data
- Rogue Wi-Fi hotspots
 - Imitate free Wi-Fi networks and capture any and all information sent by the users to legitimate sites including usernames and passwords
- Data manipulation
 - Finding entry into someone's computer network and leaving a prankster's message

Internet Scams

- Identity Theft
 - Illegal assumption of someone's identity for purpose of economic gain
- Cyber-bullying
 - Use of the Internet, cell phones, or other devices to send or post content intended to harm
- Phishing
 - Attempts to trick Internet users into thinking a fake but official-looking website is legitimate

Types of Internet Scams

Туре	Description
Chain letter	Classic chain letter instructing recipient to send a nominal amount of money to each of five people on a list. The recipient removes the first name on the list, adds his or her name at the bottom, and mails the chain letter to five friends. This is also known as a pyramid scheme. Almost all chain letters are fraudulent and illegal.
Auction fraud	Merchandise is selected and payment is sent. Merchandise is never delivered.
Vacation prize	"Free" vacation has been awarded. Upon arrival at vacation destination, the accommodations are dreadful but can be upgraded for a fee.
Advance fee loans	Guaranteed low-rate loans available to almost anyone. After applicant provides personal loan-related information, the loan is granted subject to payment of an "insurance fee."

Measures to Protect Computer Security

- Restricting access
- Encrypting data
- Anticipating disasters
 - Physical security
 - Data security
 - Disaster recovery plan
- Preventing data loss

Copyright © McGraw-Hill Education. Permission required for reproduction or display.

Measure	Description
Restricting access	Limit access to authorized persons using such measures as passwords and firewalls.
Encrypting data	Code all messages sent over a network.
Anticipating disasters	Prepare for disasters by ensuring physical security and data security through a disaster recovery plan.
Preventing data loss	Routinely copy data and store it at a remote location.

Restricting Access

- Fingerprint scanners
- Iris (eye) scanners
- Passwords
 - Dictionary attack
 - Uses software to try thousands of common words sequentially in an attempt to gain unauthorized access to a user's account

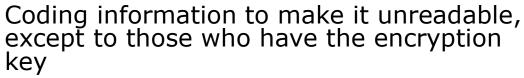

Automated Security Tasks

Ways to perform and automate important security tasks

- Security Suites
 - Provide a collection of utility programs designed to protect your privacy and security
- Firewalls
 - Security buffer between a corporation's provide network and all external networks
- Password Managers
 - Helps to create strong passwords

Encryption

- E-mail encryption protects emails
- File encryption protects files
- Web site encryption uses HTTPS protocol for protection
 - HTTPS hypertext transfer protocol secured
- Virtual private networks (VPNs)
 - Encrypts connects between company networks and their remote users
- Wireless network encryption restricts access to authorized users
 - WPA2 Wi-Fi Protected Access

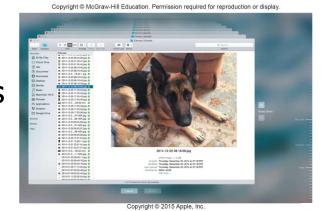

Anticipating Disasters

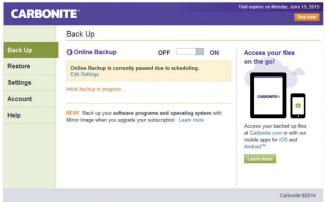

- Anticipating Disasters
 - Physical Security protects hardware
 - Data Security protects software and data from unauthorized tampering or damage
 - Disaster Recovery Plan describes ways to continue operating in the event of a disaster
- Preventing Data Loss
 - Frequent backups
 - Redundant data storage
 - Store off-site in case of loss of equipment

Making IT Work for You ~ Cloud-Based Backup

 Cloud-based backup services such as Carbonite provide cloudbased backup services.

Ethics

Standards of moral conduct Computer Ethics – guidelines for the morally acceptable use of computers

- Copyright
 - Gives content creators the right to control the use and distribution of their work
 - Paintings, books, music, films, video games
- Software piracy
 - Unauthorized copying and distribution of software
 - Digital rights management (DRM) controls access to electronic media
 - Digital Millennium Copyright Act protects against piracy

Plagiarism

Representing some other person's work and ideas as your own without giving credit to the original person's work and ideas

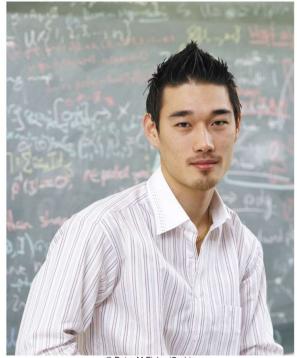

Careers in IT

- IT Security Analysts maintain the security of a company's network, systems, and data.
- Bachelors or associates degree in information systems or computer science
 - Experience is usually required
- Must safeguard information systems against external threats
- Annual salary is usually from \$62,000 to \$101,000
- Demand for this position is expected to grow

A Look to the Future ~ The End of Anonymity

 Most forums and comment areas on websites allow users to post messages anonymously

Some use this for abusive and threatening

comments

- Online harassment
- Cyberbullying
- Stalking
- Damaging reputations
- How do you feel?

Open-Ended Questions (Page 1 of 3)

- 1. Define privacy and discuss the impact of large databases, private networks, the Internet, and the Web.
- 2. Define and discuss online identity and the major privacy laws.
- Define security. Define computer crime and the impact of malicious programs, including viruses, worms, Trojan horses, and zombies, as well as denial of service attacks, rogue Wi-Fi hotspots, data manipulation, identity theft, Internet scams, and cyberbullying.

Open-Ended Questions (Page 2 of 2)

4. Discuss ways to protect computer security including restricting access, encrypting data, anticipating disasters, and preventing data loss.

5. Define ethics, and describe copyright law and plagiarism.
