DISCRETE STRUCTURE (SECI 1013-03)

SEMESTER 1-2020/2021

ASSIGNMENT#3

GROUP 13

GROUP MEMBERS:

NAME	MATRIC NO.
1. LEE JIA XIAN	A20EC0200
2. RISHMA FATHIMA BINTI BASHER	A20EC0137
3. SAKINAH AL'IZZAH BINTI MOHD ASRI	A20EC0142

LECTURER'S NAME:

DR. NOR AZIZAH BINTI ALI

Question 1

a) i) $A - B = \{1, 3, 4, 6, 7, 8\}$

ii) $A \cap B = \{2, 5\}$

$(A \cap B) \cup C = \{2, 5, a, b\}$

iii) $A \cap B \cap C = \{\}$

iv) $B \times C = \{(2, a), (2, b), (5, a), (5, b), (9, a), (9, b)\}$

v) $P(C) = \{\emptyset, \{a\}, \{b\}, \{a, b\}\}$

b) $(P \cap ((P' \cup Q)')) \cup (P \cap Q) = (P \cap ((P')' \cap Q')) \cup (P \cap Q)$ *De Morgan's law*
 $= (P \cap (P \cap Q')) \cup (P \cap Q)$ *Complement law*
 $= ((P \cap P) \cap Q') \cup (P \cap Q)$ *Associative law*
 $= (P \cap Q') \cup (P \cap Q)$ *Idempotent law*
 $= P \cap (Q' \cup Q)$ *Distributive law*
 $= P \cap (U)$ *Complement law*
 $= P$ *properties of universal set*

c)

p	q	$\neg p$	$\neg p \vee q$	$q \rightarrow p$	$(\neg p \vee q) \leftrightarrow (q \rightarrow p)$
T	T	F	T	T	T
T	F	F	F	T	F
F	T	T	T	F	F
F	F	T	T	T	T

d) Let $x = 2y + 1$

$(x + 2)^2 = x^2 + 4x + 4$

$= (2y + 1)^2 + 4(2y + 1) + 4$

$= 4y^2 + 4y + 1 + 8y + 4 + 4$

$= 2(2y^2 + 6y + 4) + 1$

let $k = 2y^2 + 6y + 4$

$= 2k + 1$ (odd)

e) i) True

(2,1)- true

(-1,0)-false

ii) true

(3,2)- true

(3,4)-false

Question 2

A(i)

Domain = {1,2,3}

Range = {1,2}

A(ii)

$R = \{(1,1), (1,2), (2,2), (3,1)\}$

R is not irreflexive because the diagonal of matrix R is not 0 which $(3,3) \notin R$ for every $x \in R$.

But R is antisymmetric because the relation of R is one way which has (1,2) but no (2,1) and has (3,1) but no (1,3).

B(i)

$S = \{(4,5), (5,4), (5,5)\}$

B(ii)

S is not reflexive because the diagonal of matrix S is not 1.

S is symmetric because $(4,5) \in S$ and $(5,4) \in S$.

$$\begin{bmatrix} 0 & 1 \\ 1 & 1 \end{bmatrix} \times \begin{bmatrix} 0 & 1 \\ 1 & 1 \end{bmatrix} = \begin{bmatrix} 1 & 1 \\ 1 & 1 \end{bmatrix}$$

The product of Boolean show that S is not transitive.

S is not equivalence relation because s is not reflexive and not transitive.

c)

i) $f: X \rightarrow Y = \{(1,1), (2,2), (3,3)\}$

ii) $g: X \rightarrow Z = \{(1,1), (2,1), (3,1)\}$

iii) $h: X \rightarrow X = \{(1,1), (2,2), (3,1)\}$

d)

i)

$$m(x) = y$$

$$4x + 3 = y$$

$$4x = y - 3$$

$$x = \frac{y-3}{4}$$

$$m^{-1}(x) = \frac{x-3}{4}$$

ii)

$$n(m(x))$$

$$= n(4x+3)$$

$$= 2(4x+3) - 4$$

$$= 8x+6-4$$

$$= 8x + 2$$

Question 3

a) i. $a_k = a_{k-1} + 2k, k \geq 2$

$$a_1 = 1$$

$$a_2 = a_1 + 2(2)$$

$$= 1 + 4$$

$$= 5$$

$$a_3 = a_2 + 2(3)$$

$$= 5 + 6$$

$$= 11$$

ii. input = k

output = a(k)

```
a(k){  
    if(k=1)  
        return 1  
    return a(k-1)+2*k  
}
```

b) $r_k = 2r_{k-1}$, when $k \geq 2$

$$r_1 = 7$$

$$r_2 = 2 \times 7 = 14$$

$$r_3 = 2 \times 14 = 28$$

$$r_4 = 2 \times 28 = 56$$

the sequence produce is,

7, 14, 28, 56, ...

c) $S(4)$

$\therefore S(4)=625$

Question 4

- a) First digit: 9 ways (3,4,5,6,7,8,9,A,B)
Second digit: 16 ways
Third digit: 16 ways
Fourth digit: 11 ways (5,6,7,8,A,B,C,D,E,F)

$$\text{Total ways} = 9 \times 16 \times 16 \times 11 = 25344$$

- b) First letter = 1 way (A)
Second letter = 26 ways
Third letter = 26 ways
Fourth letter = 26 ways

$$\begin{aligned}\text{First digit} &= 10 \text{ way (0,1,2,3,4,5,6,7,8,9)} \\ \text{Second digit} &= 10 \text{ way} \\ \text{Third digit} &= 1 \text{ way (0)}\end{aligned}$$

$$\text{Total ways} = 1 \times 26 \times 26 \times 26 \times 10 \times 10 \times 1 = 26^3 \times 10^2 = 1757600$$

- c) 1 letter
First = 8 ways

$$\text{Total} = 8 \text{ ways}$$

$$\begin{aligned}\text{2 letter} \\ \text{First} &= 8 \text{ ways} \\ \text{Second} &= 7 \text{ ways}\end{aligned}$$

$$\text{Total} = 8 \times 7 = 56 \text{ ways}$$

$$\begin{aligned}\text{3 letter} \\ \text{First} &= 8 \text{ ways} \\ \text{Second} &= 7 \text{ ways} \\ \text{Third} &= 6 \text{ way}\end{aligned}$$

$$\text{Total} = 8 \times 7 \times 6 = 336 \text{ ways}$$

$$\text{Total ways} = 8 + 56 + 336 = 400 \text{ ways}$$

d) Select 3 men

$$\begin{aligned}C(6,3) &= \frac{6!}{3!(6-3)!} \\ &= \frac{6!}{3!3!} \\ &= 20 \text{ ways}\end{aligned}$$

Select 4 women

$$\begin{aligned}C(7,4) &= \frac{7!}{4!(7-4)!} \\ &= \frac{7!}{4!3!} \\ &= 35 \text{ ways}\end{aligned}$$

$$\begin{aligned}\therefore \text{total ways} &= 20 \times 35 \\ &= 700 \text{ ways}\end{aligned}$$

$$\text{e) } \frac{11!}{1!1!1!2!1!2!1!1!1} = \frac{39916800}{4} = 9979200 \text{ way}$$

f) $C(10 + 6 - 1, 10)$

$$\begin{aligned}C(15,10) &= \frac{15!}{10!(15-10)!} \\ &= \frac{15!}{10!5!} \\ &= 3003 \text{ ways}\end{aligned}$$

Question 5

a)

3 first names and 2 last names: $3 \times 2 = 6$ ($k = 6$)

$N = 18, k=6, m=?$

$N = k(m-1) + 1$

$18 = 6(m-1) + 1$

$m = 3.83$ (showed at least 3 persons have same first and last names because $m > 3$)

b)

1-20: 10 odd numbers

Since there are 10 odd numbers from 1 to 10 so we must pick $10+1$ which is 11 integers to make sure that we got at least one odd number.

Answer: 11

c)

$100/5=20$ (20 numbers divisible by 5)

Since there are 80 numbers are not divisible by 5 from 1-100 so we must pick $80+1$ numbers which is 81 to make sure that we got at least one number is divisible by 5.

Answer: 81
