SOFTWARE SURF-ZONE

*Your limitation—it's only your
imagination*

OUR MISSION

Studying the statistics and reports, the rate of the accident deaths is increasing mostly because of not getting treatment in time. In one of the reports, the Health Ministry stated that the recent cases where ambulance reached lately or were ill-equipped, leading to two men dying. Therefore, our aim is to decrease the death rate.

OUR VISSION

Execution of the solution is the most difficult task for the process to be continued. So, our team decided to come up with software so that the victims can at least receive required emergency treatment before it's too late by using that.

HOW WE WORK

The software will be installed in all the hospitals and police stations of the country too. It will function as an auto digital tracker which will itself create an alert when accident will happen. And the nearby emergency unit must arrive within maximum 5 minutes after the alert was sent. We believe that our idea might help to reduce the death rate.
